Some people crib about desk space when it comes to gaming keyboards as many of them occupy a lot of space. The Quickfire TK from CM Storm is a keyboard which has an extremely small footprint and keeps your craving for desk space in check. Being a mechanical keyboard, the Quickfire TK has Cherry MX Red key switches with nKRO support. In order to cut down on the size of this keyboard, CM has merged the numpad with the directional and action buttons and this unusual layout may take some getting used to. The Quickfire TK has complete backlighting for each key, with three modes of operation, namely, breathing mode, WASD only mode and full mode along with five brightness levels, all of which can be adjusted using the "Fn"

Price  
₹8,000

key combination. Multimedia keys are also present, but require the use of function key combinations. The backlight is very bright and you can easily see the letters even under bright light. The cable on the keyboard is braided and is detachable, making it easy for the user to take the Quickfire TK along to LAN parties. They've also provided a key removal tool using which you can remove keys and clean the area under them. At ₹8,000, the Quickfire TK is expensive for a pint-sized keyboard with missing keys. This is a gaming only keyboard and anyone who wants to use it for typing, or requires the numpad, will tear their hair out in frustration. Unfortunately for this keyboard, the very high-price puts it into the same league as much better mechanical keyboards.

# Tt esports Poseidon

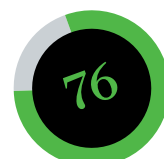

An inexpensive mechanical keyboard

The name of this keyboard might have rung a few bells in your mind, but nonetheless, this keyboard has nothing to do with the Greek God of the sea except its name of course. The Poseidon is a fully mechanical gaming keyboard with complete blue backlighting. Accessory wise, there isn't anything extra provided with this keyboard but you won't actually need anything else when using it. Usually, mechanical keyboards are very large, but this one is small even by membrane keyboard standards. Not only is it small, the spacing between its keys is also a bit less, but it won't affect most people when they use it. Thermaltake has used Cherry MX blue key switches on the Poseidon and you get that clickety clack sound

after every key press. The keys are etched and have individual LEDs for backlighting, so you get uniform backlighting across the keyboard. With four levels of backlight, this lighting is suitably customizable. The lighting is also exceedingly bright if required. The keyboard has multimedia keys coupled with the function keys. A Windows key disable switch exists on the Poseidon as well which prevents unnecessary Windows key presses while gaming. The keyboard is sturdily built and has cable routing space at the back.

At the price, this is a good gaming keyboard with basic features and all of the keys if you are going the mechanical way. But if you really like smaller-sized keyboards, then you might wanna take a look at the CM Storm QuickFire TK.
