Dell Inspiron One 2020 AIO

A space saving solution, but not a very powerful one

The basic purpose of the affordable All-in-One solution is the space saving solution. This is mainly because you get the entire PC in the footprint of what would usually be a flat panel monitor. The Dell Inspiron One 2020 that we are reviewing has the Intel Core i3-3240T processor clocking at 2.9GHz with 4GB of RAM and a 500GB hard drive. The 20-inch display has a resolution of 1600 x 900 pixels, and

that really is where the real highlight is - the touchscreen. Though you get the wireless keyboard and mouse with the machine, Windows 8 on a touchscreen is something else altogether. If only the OS were a bit more optimized.

Performance-wise, the machine needs a lot of cleanup after the first boot - removing un-needed software and trials etc, before it can really come up to the level you would expect. However, this processor is only really meant for basic daily computing tasks, as the PC Mark 07 score of 2603 showed. Multitask, and there will be the inevitable slowdown. Gaming, again isn't something that the Inspiron One 2020 can handle, with the Intel Graphics 2500. Cinebench OpenGL registered just 9.53fps in the test. But, HD media files played back very smoothly and there was no stutter while skipping the timeline of a 1080p rip.

Who is this machine meant for, you ask? Ideal for anyone who needs a machine for basic/light computing tasks

Seagate 600 SSD 240GB

Guess who's back?

Seagate has been missing from the SSD market and that's about to change with the release of the 600 SSD series. The drive uses a LAMD LM87800 controller which is pretty close to the Corsair Neutron and GTX series in terms of performance. Sequential transfer speeds averaged at 500.12 MB/s(Read) and 451.67 MB/s(Write) which is pretty standard these days for SSDs. The build quality is pretty good with the metal casing acting as a directly attached heatsink for the controller. There is Pro variant for those interested in data integrity. They have 4 big capacitors which should supply power for all transfers to complete prior to power down.
