Corsair Obsidian 900D

The largest, most awesome case in the market today?

The Corsair Obsidian 900D is Corsair's new flagship case that replaces the Obsidian 800D. You'll see that this case is one of the largest case we've ever tested. The Cooler Master Cosmos II is only a bit larger than this but doesn't offer as much flexibility. The front of this case has a full brushed aluminium finish with the drive bays also having brushed aluminium panels. The bottom front panel pops out to reveal a big push-to-remove dust filter, behind which you'll find three, pre-installed static pressure fans. A push-to-release plate at the front hides the front I/O panel and has four USB 2.0 and two USB 3.0 ports among the usual audio jacks.

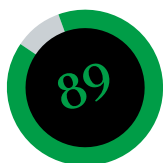

Price
₹30,000

The top of the case is a big, meshed removable panel with a dust filter attached to it. But the best part about the 900D has to be its side panel, which has a big, smoked, acrylic window that lets you show off the innards of a system built inside. It's a cinch to open the side panels using the provided buttons at the back of the case, which if pressed, pops the panel out. Each of the sides of the 900D has two doors with one being the bigger door to access the motherboard area and the other one being a smaller one at the bottom that lets users access the hot swappable drive bays built into the case. The interior of the 900D is as intimidating as the exterior with a huge area for installing even XL-ATX and HPTX boards and the entire motherboard tray is replete with strategically

placed cable management cutouts covered by rubber grommets. Another interesting feature of the 900D is the space for installing two PSUs simultaneously, but there won't be many people out there who would do this. The Obsidian 900D is primed for liquid cooling as it has space for some of the most elaborate liquid cooling setups a person can think of. There is space for installing a full size 480mm radiator at the top, another

480mm at the bottom on one side, a 240mm on the other side at the bottom as well, a 140mm radiator at the rear and finally, a 360mm radiator at the front; you can go nuts with the 900D while building a liquid cooled rig. If you need more space (we hardly think you will) but you can remove the hard drive cages and make more room. Most of the parts of it use screws instead of rivets to allow for modding options. With the internal cabinet temperature being 32.5°C when idle and 38.5°C under full load to the test setup, the performance is nothing short of impressive. At ₹30,000 the Obsidian 900D is an excellent case but it's definitely not for the faint of heart. One should go for it if they are building a fully blown, no-holds-barred water-cooled setup.

Calibre ULTRA'Go Mini power station

Well built & capable

Price
₹4,799

The ULTRA'Go Mini packs in a 3500mAh battery inside an all-aluminum enclosure. Simply put, a fully charged ULTRA'Go Mini can charge a completely discharged iPhone 5 twice, and then some. The device has a standard USB port allowing you to connect any device specific USB cable to it. We have used this device to charge a variety of smartphones (Android and iOS), and the charging times are very much at par with what you would get from the proper wall charger. Multiple colour options are available as well - Titanium Grey, Burgundy Red, Charcoal Black and Metal Silver.
