

media and technology for making the world a better place, and then to translate that potential into action.

The Grand Jury members who reviewed the final set of selected apps to rank the winners included:

- Osama Manzar, Founder, Digital Empowerment Foundation;
- Rajiv Makhni, Managing Editor, Technology, NDTV
- Rita Soni, Head, NASSCOM Foundation
- Parul Soni, Executive Director, Ernst & Young
- Pramath Raj Sinha, Founder, 99 Media
- Pooran Chandra Pandey, Executive Director, Global Compact Network
- Kavita Narayan, Head, Public Health Foundation of India
- Dipankar Sanyal, CEO, TERI BCSD
- Gauri Arora, CSR Lead, Microsoft
- Soumya Sarkar, National Editor, Mint
- Don Mohanlal, CEO, The Nand & Jeet Khemka Foundation

The Grand Jury had been sent a copy of the presentations made by each of the short-listed teams for early deliberation so that when they came together into that one room, they had all their thoughts ready and organized. What followed was a long, insightful and a very lively discussion not just about the apps in question, but also about the various issues the country faces and how they can be tackled.

The Jury not only had to classify each of the city selections into Ranks of 1, 2 and 3, but also choose the top three from this talented pool for a recommendation to Nokia App Campus, which is an incredibly large amount of money for helping developers bring their ideas to life.

The Tri-City Fiesta

Each of the three Hackathons was different from the other. While Delhi saw a lot of lively youth come forward to create apps, Bangalore's crowd was more "grown-up," comprising of mostly serious, senior developers. Pune was a completely novel experience, as all the teams that entered were rather young, but also comprised of at least one graphic designer. Pune also saw got lucky with a limitless supply of RedBull and even night long entertainment thanks to the several Xbox Stations that had been setup.

Interestingly all three cities seemed to lean towards one specific issue. Delhi's participants seemed to be more environmentally conscious while Bangalore's developers were more tuned into the needs of the education sector. Pune's youth were more focussed on developing apps that would ease the pressure on medical staff, designing apps that would be helpful not just to the doctors, but also nurses, patients and even hospitals as a whole.

POV shot from the judges' side

A few apps that really stood out from the crowd were ones like MeNeedLife, which created a social ecosystem to engage blood donors, organ donors, organ recipients and blood recipients. The app also outlines the kind of guidelines one might have to follow in order to be a donor, guidelines specific to the type of organ you are donating, etc. From Bangalore, we had an app called "Feed the Hungry", which

Intrepid developers busy discussing their work

originally started out as an app that would help various food collection agencies tie up with people/organizations who've got food to give away. All you have to input your spare/excess food into the app and the donations would be sorted out.

It was incredibly refreshing to see just how much effort these developers were willing to put into developing something that transcends the self and looks to address the issues of the larger whole. What was really good to see was that developers had gone the extra mile to travel to the host city of the Hackathon. Pune especially saw the maximum number of out-of-city participants, with nearly 50 percent out-of-townners, the farthest being from Gujarat.

The Final Verdict

The Grand Jury took their time mulling over every single idea in great depth and combining it with their awareness of the issues at hand. Here are the apps that were finally selected by the Jury.

While only some 22 odd ideas may have won a prize, Nokia made special efforts to ensure that every developer who had a worthy idea (besides these) was connected to organizations that could either help out with the development of their app, or NGOs and companies who would have actually benefitted from the app's development.

Hackathon Winners			
City	1st Prize- Lumia 920	2nd Prize- Lumia 820	3rd Prize- Lumia 720
Delhi	Food Wastage Prevention Have & Have not	Dentro Go Green Dots Helper	Fuel Tracker Team Board
Bangalore	Feed the Hungry	Wake up Sister Missing Snap Read Improve your Infrastructure	Learning Alphabet Kannada
Pune	Meneedlife Kidnee		Sahaya Stay Healthy Forever Chhota Bheem Rise India Wecharity Immunity Buster

The idea of social good was not limited to just the winners, but had to encompass all the attendees of the event. The Hackathon was quite a success and it was humbling to see the dedication of these developers as they went about their work, but also an enriching and exciting experience, getting to meet many new people and understanding the various points-of-view. >
