Point and shoot!

Cellphone cameras have improved a lot over the years and so we pit eight smartphone cameras in this shoot-out and let you know which snapper is the absolute best of the lot for your needs

Swapnil Mathur

Saying that cellphones have come a long way would be one of the biggest understatements of the year. They've gone from large, clunky monochromed bricks to devices that are designed with elegance and have rendered the notebook, the mp3 player, and even wallets (in some cases) obsolete! The cellphone advancement is heading in the

direction of being the "one-device-to-rule-them-all". It has its eyes set on replacing your point and shoot camera.

With society becoming increasingly connected, thanks to social media and its increasing need to share information in a world where individual citizens try to grasp on to the fading idea of privacy, the camera has become extremely essential for the proper functioning of this social machine. Earlier, it was "take your camera, shoot the

party, go home, transfer photos to your PC and THEN post them online." The process was long and tedious and someone had the genius idea of "what if you could just take the photos on your phone?" While it was a solid notion, the problem was that cellphone cameras with their miniature sensors just couldn't match up to the quality of even the basic point and shoot.

Today, all that changes. We have with us eight cellphones

with industry-leading camera modules. Nokia revolutionized the game with the PureView 808 and its 41 megapixel sensor and then again with the Lumia 920, the first cellphone to have optical image stabilization built in. Sony brought another game changer, by putting a point and shoot camera sensor and optics into a phone. Then there is the iPhone, which changed how much we all shared online. The LG G2 brings a totally novel shooting ergonomic into an
