

Bye-Bye Macbook

Apple decided to discontinue its 15-inch MacBook Pro, so what did it leave behind?
<http://dgit.in/He08pd>

iOS 7 Upgrade

The new iOS 7 upgrade has some pretty distinct changes. Does it fix the bugs in the first version?
<http://dgit.in/1cX7GJl>

hardly putting a foot wrong. It sports a contrasting design to the HP Pavilion 21 – which has a kick stand, only allowing it to lean backward – allowing its display to pivot about a hinge, not unlike an iMac. The C340's thick aluminium stand is easily among the best built ones we've come across in this test, giving the device great support and freedom of movement. It's available in two colours – white and black – and offers good overall performance and a feature set

that doesn't skimp on any of the essentials. What's more, apart from an HDMI-in port, the C340 sports a matte display that's great for watching movies too. Little things like the presence of a Rupee symbol on its keyboard (which is great to type on, by the way), and a robust set of proprietary software (Lenovo Vantage Technologies) including a rather helpful Education Portal tool makes it a well thought out product for a consumer on a budget, looking for a stylish,

no-nonsense AIO that does its job well.

Comparing this to the Dell Inspiron One 2020, a device that is very close to the IdeaCentre C340 in terms of overall performance and features, we see that the Dell Inspiron One 2020 loses out on build and design points. Plus, the fact that the Inspiron comes with a touch-screen sends its cost spiralling out of control.

It's the same story with Lenovo's IdeaCentre C440 which also features a touch-screen display (with Full HD support) and a built-in TV tuner card and media center remote. While the C440 has that unique TV-cum-PC thing going for it, its hardware and performance doesn't keep up with the 2020 or C440; it's even priced higher than the latter.

The choice couldn't be simpler. Consider the Lenovo IdeaCentre C440 for its TV-cum-PC functionality, with a touch-enabled screen and all other design characteristics, if that's what you're looking for. If you want a touch-enabled AIO with significantly better overall performance than the Lenovo C440, then check out the Dell Inspiron One 2020. If you don't give a hoot about either touchscreen displays or out-of-the-box TV functionality, and desire a well performing, sleek AIO desktop on a tight budget then look no further than the Lenovo IdeaCentre C340. It's our **Best Buy** recommendation – all things considered, a well deserved win.

We know that having high expectations from the cheapest

AIO in the comparison is asking a bit too much, but that doesn't absolve the HP 18-1106in of its poor showing. It had the lowest performance, had the fewest features, and failed to be anything more than a dull plastic box. The HP 18 couldn't play HD movies and it felt sluggish even while loading regular apps, not to mention the disappointing multitasking. On this evidence, it's hard to recommend the machine even if you're looking to buy one under ₹30k. In the absence of candidates from Lenovo and others, we advise you to spend a little extra and consider some of the other machines we mentioned earlier in this category.

Above ₹50,000

The higher end of the AIO market always promised to have some interesting, innovative and drop-dead gorgeous products on offer. And we weren't disappointed.

The HP Pavilion TouchSmart 23-f201in bags our **Best Buy** for the category and for good reason. It takes some of the best things offered by the HP Pavilion 21 (our **Best Performer**) and takes it to a whole new level, also incorporating features its cheaper sibling skips. The HP Pavilion Touchsmart 23 has a gorgeous 23-inch, Full HD IPS LED display that makes movie watching a very good experience – given the device's decent onboard speakers. Five-finger, multitouch gestures helps you make the most of Windows 8. In terms of features, it packs in everything except an HDMI port and TV mode, but it more than
