Q&A

USB adapter and which will give me better performance?

-TheLetterD (tdf member)

A Generally the connection drops if the signal is not good enough. Connection drops are quite frequent and common when reception is 1-2 Bars. You can try various DIY tricks, most of them which are based on using an aluminium foil to extend the router's range and improve signal strength. Search online and you'll find many tips and tricks for this. Since it's your desktop that does not receive the signal properly, it's advisable to go for a wireless USB adapter in the long run. That will solve the issue.

Display driver troubles

I am facing a problem since last few days where windows device manager shows "Windows has stopped this device because it has reported problems. (Code 43)" for my Nvidia GeForce 8400M GS graphics card on an HP Pavilion dv6000. I am unable to play any games or movies on my laptop and I've attached the snapshot of the error. Please help in resolving this issue.

-askjeeves (tdf member)

A It seems that your graphics driver is going through the motions. First, uninstall your current GPU drivers and remove the leftover registry entries or files using Driver Sweeper (Fusion now). Next download and install the latest drivers for your GPU from NVIDIA's website. After you've done installing the drivers, restart

your laptop. This should solve the issue but if somehow the issue still exists, then reinstall the operating system. Check whether the problem persists. If yes, then download and install temperature monitoring utilities such as HWMonitor, RealTemp and GPU-Z. Now check and make sure whether any of the components are overheating.

GTA IV not working

I recently bought a copy of GTA IV and installed it on my PC and it installed correctly. I had to later do a system format as my PC was infected by malwares. Once I was done formatting the system and it was up and running, I tried to install GTA IV. I did this after referring to the game's guide book which told me that I can install the game unlimited number of times. As soon as I entered the Disc,

a dialog box appeared with two options: "Launch Rockstar Games Social Club" and "Cancel". As soon as I click the "Launch Rockstar Games Social Club" tab, the dialog box disappears and nothing happens. Is it due to the possibility of not having an Internet Connection? Or is it something else. Please help.

-Souveek Pradhan

A An internet connection is prerequisite for initially activating GTA IV and this is why you're unable to start the game. Connect to the internet and then follow the same process. You should now be able to launch it. If it doesn't work, then go to the game's website and install the latest patch for the game which should fix the issue.

Overheating CPU

I recently checked out the CPU temperature of my PC and was shocked to see the load temperature was at 78° C. I am using this PC from the past two years and it worked fine but since the temperatures are so high I think it's a cause for concern. To fix this I cleaned my PC cabinet and though the load temps decreased, the fall in temperature was only 2° C. What should I do? Please help

-Atharva Kadam

A Open your PC case and carefully remove the heat sink installed over the CPU. Next, clean the CPU surface and the heat sink base using a soft cloth. Now, apply a small amount of thermal paste on the CPU surface. Reinstall the heatsink.
