

Instances of Asimov, Clarke, Sagan, Lucas appearing over time

Expand your research with NGrams:

Google's Ngram Viewer is a handy little tool. It lets you search millions of books over half a millennium for keywords. This comes in handy when you're trying to find trends over a period of time. The Ngram Viewer also has advanced options to make this more effective. This helps expand your search if you're looking for keywords that are specific parts of speech or if

you want to combine keywords. For example, here's the graph for Isaac Asimov, Arthur C. Clarke, Carl Sagan and George Lucas in fiction: <http://dgit.in/sci-fivisionaries>

Multilingua Franca avec Google Chat Bots:

Google Translate's chat bots are an interesting feature for Google talk. If you tend to chat with people of a certain nationality very often, it makes typing in their language much easier.

Adding a chat bot is quite easy: Check the bot username from the list of available chat bots here: <http://dgit.in/firangibots>

Add them to your GTalk list with the domain '@bot.talk.google.com' (for example, the English-French bot would be called 'en2fr@bot.talk.google.com')

Type in what you need translated, and the bot will reply with the translated text. Check the image for an example.

Manage Your Website and Business:

Webmaster Tools, coupled with Google's Data Markup Helper and Places for Business has made website management a skill more easily available for people. These tools help monitor a site's health, traffic and eyeballs.

Google's Places for Business: Google's Places for Business is the LinkedIn of enterprises. It's a place where you can consolidate all the information you need to put forward with respect to running your own business enterprise. It's a great instrument in the hands of people who can really use it to its full potential. It's also good for entrepreneurs who want a place to meet people and expand their influence in the right circles. Check it out: <http://dgit.in/tntwbms>

Trendy and Insightful: Google Think Insights and Google Trends is very useful for people who want to study emerging patterns in the behaviour of the masses. Keeping an eye open on this helps people know more about their constantly changing target audience.

Google Trends (as the name suggests) tracks the trends of people online based on searches run and pages which have been more frequently viewed by people. Try it out: <http://www.google.com/trends/>

Google Think Insights does the same, but with some more detail. It gives the user a list of studies conducted, trends and ideas across industries, platforms as well as audiences in one place. Everything from high-level visions to deck-ready data points is tracked and laid out. The website is effective, clean, and easy to use. <http://www.google.com/think/>

Google People Finder

DESIGNO SERIES MX299Q Ultrawide 21:9 Cinematic LCD Monitor

Wider Panorama of Vision and Sound

Wider Means Better

Ultrawide 21:9, 2560 x 1080 resolution LED display with a frameless, edge-to-edge design

Vivid Visuals Come Live

Enjoy lifelike images through an A-grade AH-IPS display with 178° wide-view angle and 80,000,000:1 ASUS Smart Contrast Ratio

Premium Immersive Audio

ASUS SonicMaster Technology, co-developed with Bang & Olufsen ICEpower®

Robust Connectivity

Featuring DisplayPort, HDMI/MHL, and Dual-Link DVI ports for multi device connections
