OUR PICK OF THE BEST TECH ARTICLES FROM AROUND THE GLOBE

(MUST READS)

DO WE LIVE IN THE MATRIX?

A question even Digit has taken a crack at in the past, now scientists have discovered tests which may reveal that we are part of a giant computer simulation. But seriously, do we really want to know?

A DAY IN THE LIFE OF AN APPLE EMPLOYEE

Think working for Apple would be the coolest thing ever? Well it might just be, but not so much if you happen to work in an Apple store and have to directly deal with irate customers. Sure you get the Apple employee discount which would make you extremely popular, but there's a price to pay.

HOW LONG DO HDDS REALLY LAST?

If you ask a cynic you'll probably get the answer as "until exactly one week longer than your warranty". Until Backblaze released a study recently, guesses like that were all we had. Now we know how long you can reasonably count on a hard drive. Read on to know more.

HOW GOOGLE LOST

In the aftermath of the Apple Maps fiasco, everyone thought Google came out the winner in that little skirmish. But in reality ComScore research shows that while Apple suffered a PR disaster over maps, Google lost 23m iPhone users in the US! Find out more here:

[Scientific American Corner]

ELECTRON APPEARS SPHERICAL, SQUASHING HOPES FOR NEW PHYSICS THEORIES

The most precise measurement yet of the electron's shape casts doubt on ideas such as supersymmetry that predict a zoo of undetected particles in the universe. <http://dgit.in/elctrnrd>

How many friends can your brain handle?

It seems there are advantages to being a social butterfly. Certain brain areas are enlarged and white-matter tracts were better connected in people with larger social networks!

What shaped our evolution?

A new study links the emergence of new hominin species, expanding brain capacity and early human migration with the appearance of deep freshwater lakes – all results of plate tectonics and climate change.

Do people really care about wearable tech?

A Harris poll finds that many Americans wonder how smartwatches and smartglasses would fit into the average person's life. Listen to this Scientific American podcast for more:
