5 reasons why the Nexus 5 should be your next phone

Looking for a reason to pick up the Nexus 5? We give you five!

- By Sameer Mitha

From what we have read, heard and seen, the Nexus 5 is a pretty badass phone. I have had the pleasure of using the phone for a short period of time and it is a wonderful device.

If you are in the market to pick up a flagship smartphone, and are spoiled for choice with the likes of the LG G2, Galaxy S4, HTC One, Xperia Z1 and more, we give you five reasons the Nexus 5 is worth considering.

Great Hardware

Kicking things off, of course, are the specifications of the tablet. The smartphone has a 4.95-inch True HD IPS Plus display with a 1920x1080 pixel resolution giving it a pixel density of 445ppi. Under the hood, a 2.26GHz quad-core Qualcomm Snapdragon 800 processor coupled with 2GB of RAM powers the device. It has an 8MP camera with OIS and the front has a 1.3MP camera. A 2300mAh battery powers the smartphone. The device is available in two storage variants - 16GB and 32GB. This is a bump up when compared to the Nexus 4, which came with 8GB and 16GB built-in storage.

The Nexus 5 stands tall bringing the same hardware that is powering the LG G2. Sure, the battery is a mere 2300mAh but we think it can last through a day, at least.

Android all the way!

The prime reason why anyone would pick up a Nexus device is the vanilla Android experience. The smartphone runs Android 4.4 KitKat straight out of the box and keeping Google's policies in mind, the

smartphone will receive all major Google OS updates for the next 18 months. The Android 4.4 KitKat update is available for the Nexus 4 and it will take a few days to hit Nexus devices in India but when it does, the roll out will be very smooth. If you want to be the first to receive the Android updates, then the Nexus 5 should definitely be your weapon of choice.

If you are someone who likes skins overlaying the OS, the Play store has a large number of paid and free skins and themes to choose from.

Price

The 16GB Nexus 5 is priced at ₹28,999 and the 32GB Nexus 5 is priced at ₹32,999. Let's put this into perspective. The 16GB iPhone 5S is priced at ₹53,500. The LG G2 is priced at ₹40,490 for the 16GB and ₹43,490 for the 32GB. The 16GB Samsung Galaxy S4 is priced at ₹38,999 and the HTC One is selling for ₹46,999 for the 32GB. The Sony Xperia Z1 is priced at ₹38,700. The G2, Z1 and the S4 boast of expandable storage.

From those prices, it is evident that the Nexus brings with it some great hardware

at a more affordable price when compared to what the competition has to offer.

Display

The 5-inch 1080p display of the smartphone has a True HD IPS+ panel and a pixel density of 445 ppi. On paper, the display is the same as the LG G2 and the G2 has a display to die for. It has great viewing angles, is very vibrant and vivid. Put simply, it's one of the best displays we have seen on a smartphone.

The same was the case with the Nexus 4 and the LG Optimus G. The Optimus G had an incredible display which didn't translate to the Nexus 4. Even if it's the same with the Nexus 5, you still get a great display.

Build

One of the biggest pros and cons with the Nexus 4 was the build of the smartphone. The Nexus 4 had a glass back that made the smartphone look really sexy. The downside was that one drop could break the panel.

This time around Google has gone with a safer bet. Rather than a glass back, you have a rubberized finish very reminiscent of the Nexus 7 2013. The device is comfortable to hold, and the build, though simple, is great. The smartphone may not turn heads like the Nexus 4 but the bigger, bolder Nexus branding at the back is sure to garner attention. The smartphone is available in two colours - black and white some accessories are available on the India Play store as well.

If you are one who is interested in picking up a Nexus 5 can do so from the Google Play store or from eBay.
