

Reviewing the Doctor

The Doctor Who 50th anniversary special: Day of the Doctor was reviewed by Mashable. Read on to see what it has to say <http://dgit.in/drwhoview>

Flying Jellyfish

Is it a bird? Is it a plane? Is it a...Jellyfish?? Read more about the flying robot that moves like a jellyfish <http://dgit.in/jellyfly>

LETTER OF THE MONTH

☒ Hi Team Digit. The cover story last month was really impressive and helpful. The Buzz section brought forth lots of latest news and App Watch was good too. World View's both articles, "The thrill is gone" and the Google one were really true. Tips and Tricks were helpful, especially the "Boost Windows' Startup" one. The Workshop section really impressed me. I downloaded the Predator app mentioned there, and it was awesome. Then, in the Comparison Test the reviews weren't separate and even the specs sheet was still placed in between the write-ups. That forced me to skip those pages to continue on to the Bazaar section which was good. There is one more request: in the upcoming January issue do a story on something like "Gadgets of the year 2013". It can even be your cover story. I want to see who wins this battle. This 13-year-old guy really appreciates the work you're doing. And don't worry, I'm

not at all requesting for a Digit t-shirt!

- Harsh Khurana

☒ Glad you liked the last issue. As for your complaint about individual reviews not being present in the comparison test, there are a couple of reasons we do that. Sometimes we get so many products that it's difficult to talk at length about each of them in a comparison test. Secondly, there are times when we can bring out more decision specific clarity by talking about particular aspects of products such as performance or features. The cover story idea you suggested is exactly what our Zero 1 awards is all about – a battle of the year's best products. On the contrary if you want a take on the year's not-so-great products I'm sure you'll like Jayesh's column. Keep writing in. And since you didn't ask for a t-shirt, here's one.

- Siddharth

avoid that because many users don't have cameras.

- As many readers are demanding, please provide TED videos regularly in your DVDs.
- I want to thank you for controlling the amount and types of ads in the magazine. Some ads are useful and aren't annoying unlike that Intel XDK ad.
- DGT is always nice to receive. No need to change anything in that.

All in all, all the work you guys do is fabulous. Keep it up and do consider people's suggestions as some of them are very helpful.

-Paras Sidhu

☒ Thank you Paras (I hope that's your first name. Your email ID was a little confusing. Correct me if I am wrong.)

We will look into implementing some of your suggestions and we're glad you like most of what we do. We cannot focus too much on developers all the time, but we

certainly will try and keep you updated. I think we cover most product categories, and don't really overdo any one, and cameras are a category we get a lot of people asking for more of. As you can tell, it's really tough to cater to everyone's needs and make everyone happy.

I cannot promise to keep everyone happy, all of the time, because I am sure there will be issues you will like less than others in the future as well, but I can promise to keep "almost everyone" happy "most" of the time, which includes you as well :)

- Robert

☒ First of all I must say that everything I read in Digit in simply, absolutely amazing. The style of writing, the issues covered, anything and everything about this magazine makes me wonder, how are these guys able to do so much in just a month?

I haven't read many issues, just 3-4 of them, and I haven't found anything more

comprehensive and useful. Being a B.tech CSE student, the information you give is much needed, and helps me know stuff that I feel I must be aware of as an engineering student and gadget enthusiast.

I can probably write a 20-page mail just praising your November issue.

However there's one thing I would like to request: apart from development and coding and hardware, there is another side to computers. The theoretical side. The stuff about machine learning, cryptography and robotics is also another extremely intriguing part of this world. As a research enthusiast I would like to say that we Indians are great at coding, but we need to go a step ahead and learn about the above mentioned stuff. Though there is increasing awareness about these topics, it's spreading slowly. It would be great if guys like you could actually try and fit this into your upcoming issues, even if it's only a small part. I see that many people in India (at least students) relate computers to only coding, which is not even 10 percent of it. I believe that you guys can actually be the harbingers of change and help create awareness about such topics by attracting the interest of your readers and thus perhaps an increased involvement in research as well.

P.S. I still want to know how you cover so much ground in such less time. I used to write too, but don't anymore and thus know the amount of work that goes into creating something which keeps the readers interested and always wanting for more.

- Akshay Agarwal

☒ Well you're on the right track and we completely agree with you. In fact let's take the example of the three topics you mentioned – machine learning, cryptography and robotics. Machine learning is something we talk about all the time in our Sci-Tech section. We had an entire Fast Track on Cryptography in November 2012 and an FT to Building Your Own Robot about a year before that. In fact some would say we lean too much towards the slightly esoteric science, but knowing your tastes I'm pretty sure you're going to like our current issue, especially the stories in the Special Features section this month.

- Siddharth
