

▲ CORSAIR H110

Price: ₹10,195

CPU Coolers

CPU TDP (Thermal Design Power) has been continuously falling through the years due to the improvement in manufacturing processes and the shrink in die size. At the same time, CPU coolers seem to be getting more popular with more people opting to go for an all-in-one liquid cooler. High end air coolers are still capable of outperforming many all-in-one liquid coolers but some good liquid coolers give you much more headroom when overclocking; while proper custom built ones will throw the cooling chart out the window.

Zero1 Winner

Corsair H110

There were many contenders for the coveted Zero 1 title and the only coolers that gave the Corsair H110 some competition were the ones with a 280mm radiator. This is justified because of the fact that in cooling, the more the surface area, the better the heat dissipation. The H110 came out on top because not only did it keep the CPU temperature low but it was silent, unlike many of the other liquid coolers during testing. At about 9.5K it's pricey but definitely worth it.

NZXT Kraken
X60

Price: ₹9,000

Nepton 280L

Price: TBC

Worthy Mentions

The NZXT Kraken X60 was the next best cooler after the Corsair H110 and it came by no surprise as both the coolers were similarly designed. Frankly speaking, the performance difference between this, the Corsair H110 and Cooler Master's latest Nepton 280L was marginal and it only depends on you and where you want to spend your money.

As an aside, if we were to recommend the best performing air cooler, then that would be the Noctua NH-U14S as it is an excellent air cooler and is extremely silent.
