

SSDs

The whole PC building scenario took a turn when SSDs were revealed to the world. Enthusiasts and gamers alike, everyone started to go for an SSD as their primary system drive and then pairing it with a HDD for storage purposes. SSD prices have always been quite high but they've fallen down a bit now. It won't be long before SSDs completely replace mechanical drives and become more mainstream while also selling for cheap. We've also noted a rise in the capacities on offer; it's still nowhere near that of tradition HDDs.

Zero1 Winner

Samsung 840 Pro

We actually had to pinch ourselves to see whether we were dreaming when we tested the Samsung 840 Pro series SSD, the performance was staggering. Housing a three-core MDX controller and 8x 32GB Samsung MLC toggle mode NAND chips it easily touches synthetic transfer speeds of 530 MB/s in sequential trans-

SanDisk Extreme II
Price: ₹26,100

fers. The real world performance of the 840 Pro was also quick. The Samsung 840 Pro series 256GB is what you should go for when you want the best performing SSD, regardless of cost or any other factor.

Notable Mentions

SanDisk Extreme II

The Extreme II from SanDisk was the only drive that came the closest to the Samsung 840 Pro. With AS SSD benchmark scores for Sequential Read and Write being 521.97 MB/s and 467.92 MB/s respectively; the SanDisk Extreme II was a worthy contender for the Zero1 title as well but the Samsung 840 Pro came out on top. It is on the expensive side though.
