CM Storm Devastator Combo

A great gaming combo for cheap

Price
₹3,100

We're often fooled into buying expensive products from manufacturers especially when it comes to gaming. But as it happens, a cheap alternative always exists in the market. The CM Storm Devastator combo is one such alternative. The keyboard in the combo has a nice futuristic design with angled edges and a partly matte,

partly glossy finish. It's a blue backlit keyboard and doesn't have individual LED backlighting. The keyboard doesn't have a brightness control feature which means that you can only turn the backlight on or off. Turning the backlight off we noticed the only niggling part about the keyboard; we could barely see the letters on the keycaps even in daylight and were forced to use it with the backlight on. Features wise the keyboard has multimedia and volume keys at the top. All the buttons are well spaced and give a good tactile feedback when used, even during gaming.

CM Storm took a flatter design approach with the mouse and people who like slimmer mice would like it. It has a 2000 DPI sensor with a quick DPI switch for switching between 800-1600-2000 DPI modes. There are rubber side pads on the mouse that add some grip to it. The mouse tracked well during gaming and we didn't have any misgivings with it. The Cooler Master Storm Devastator combo is one of the best cheap gaming combos we've come across in a while. And we give it our thumbs up.

Logitech G430

Boom boom. Boom?

Price
₹6,500

Spending upwards of 5k on a gaming headset is not an easy decision to make and if a headset demands that much from you, it better be very sure of itself. The G430 just might be that set. It's a great set, the bass is more on the boomy side, though not in the same league as the Creative SoundBlaster series, but the positioning is spot on and we were never let down. The set looks fiddle-some and flimsy but feels surprisingly sturdy. It's light and comfortable and the large ear-cups sit comfortably. It's mic's noise cancellation feature doesn't work very well. The USB adapter is a nice addition and the gimmicky 7.1 surround sound may appeal to some people.

ASUS B85 Vanguard

Built to last

Price
₹7,800

At first glance you notice nothing unusual about this board as it looks like any other mATX board. It's when you rummage through the box later that you discover a certificate which certifies that the capacitors, chokes and MOSFET have all been through military grade testing, including tests for moisture resistance, thermal shock and even salt spray. Since a motherboard is not the kind of thing we would take to the beach, we'll take ASUS's word for it. Other than that, the board has some fine tuning options in the BIOS if you want to tweak voltages and as a bonus, you can take notes within the BIOS itself. Other than that and the build quality, there's nothing else that really stands out.
