HP Chromebook 14-q001tu

A streamlined OS meant for very specific use cases

If you had chided Microsoft for the lack of the start button in Windows 8, this OS will possibly invite more snorts of derision, as Chrome OS is a brand new look at desktop OSes.

For starters, and for all purposes, most of the stuff will run in the Chrome web browser, that's where you'll spend most of your time on the Chromebook. The base is the Chrome OS, and the quintessential window to the world of the Internet is the Chrome browser. You can download apps on this, but they will be web based versions. Dropbox? Web version. Pixlr image editor? Web version. What you essentially need to come to terms with is that most of these "apps" that you download from the Chrome store, are shortcuts to the web page. In other words, they're Web apps. Nothing is stored locally, as there are no programs to install. Getting used to this from a Windows environment is itself a bit of a learning curve, but then if you're used to doing everything in your browser (Chrome on Windows) it may not feel as intimidating as it sounds. The range of apps for Chrome OS is still limited, but worry not, you'll find most of the essential apps (spreadsheet, document, video, scheduler, reminder, photo editor, calendar, etc, etc.) covered.

As an OS, Chrome has its distinct advantages. It is simple, uncluttered, and to the point. There are no pretensions of taking on Windows or OS X, and that is what makes this so enticing. Chrome OS is meant for doing things on the Web and ideal for someone who is already using the Google ecosystem heavily: Chrome browser, Gmail, Drive, Calendar, etc., for their work. And also for someone who needs an easy to use laptop for web browsing, accessing emails, streaming media and playing the odd casual game.

For that particular task, the Chromebook 14-q001tu from HP does a very good job. And sets an example of why specification sheets aren't always a good indicator of the level of performance you could expect from any notebook. On paper, the Chromebook 14 has an Intel Celeron 2955U (Dual-Core) processor clocking at 1.4GHz with 4GB of RAM. For an OS as simple and streamlined as Chrome, this spec is more than enough. We really have no synthetic benchmarks for this, but it cold booted under 10 seconds. As a primary laptop for a day at work, there was never a stutter or system freeze while we watched YouTube videos, streamed

online radio, worked on spreadsheets, and more. After opening up to 20 tabs in Chrome, and the only real load indication of lag was that from a slightly sluggish cursor while working on a large spreadsheet. Not bad.

For a machine that is quite slim, its build quality is quite good. It's high quality plastic throughout, and feels well put together, although the display hinge could've been even better. The HP Chromebook 14 sports a very good keyboard with nice haptic feedback, and its amount of connectivity options also cover all bases. Typing quickly is easy, with a sharp and precise response. The only issue is that the Caps Lock key is marked as the search key, and by default, the Caps Lock method needs you to press Alt and the Search key. You can change that in the settings. There is no optical drive here, but what you get are three USB 2.0 ports, memory card reader and an HDMI out. The lid is pure white in colour, with the Chrome branding very prominent. The keyboard deck is warm grey in colour, while the base is again pure white, and holding the slim laptop in one's hand or in the lap is no problem whatsoever.

Battery life is stupendous, and for the same tasks that we would do on our primary laptop in office, the HP Chromebook 14 lasted a full 8 hours. On conservative settings, you can sail past 10 hours even. True all-day computing on this one.

If there is one issue with the Chromebook 14, it is that there is just 16GB of internal space on board. Yes, Google Drive provides an additional 100GB online, but without good Internet there's a problem. Barring that, if you needed a fresh new perspective to a desktop OS, buy this machine.
