Heavy and well built are the first thoughts that will come to your mind when you hold the Lenovo smartphone for the first time. The rear of the smartphone is metal giving it a great finish.

A lot of the UI elements of the smartphone is skinned and not stock Android. Coming to the suite of preloaded apps, you have access to a 'super gallery' (with your images and videos), AccuWeather, CamCard (reads business cards), CamScanner (which scans documents), Route 66 maps + navigation, and some games.

One interesting app that comes preloaded with the device is Lenovo Power. The app shows you the power consumption of the smartphone and also has a bunch of modes in which you can use it – extreme, long, best and customized. Each mode has its own unique feature of

saving battery and if you want to customize, then use the customized profile.

The device ran all the apps we threw at it quite well and its performance as a phone for calling and texting is good too. The camera is average for well-lit shots and there is noise when images are clicked in low-lit situations. The battery of the smartphone can last for 2 days with ease.

The Lenovo P780 brings quite a few good features to the table. The build is solid and the battery life is great. The preloaded UI may not appeal to all but it gets the job done. The down side is that the camera is average and the battery is non removable. If you are in the market to pick up a sub 20k phone with a great battery life, definitely try this.

Gionee ELife E6

A well-built smartphone with an interesting UI

The Gionee ELife E6 has a slim and sexy unibody design. You could easily mistake the product for a premium smartphone which is comfortable to hold.

The smartphone has a black matte finish that is a fingerprint magnet. The E6 has the microUSB port at the bottom and on its either side are the speakers. The left houses the microSIM card slot and the right has the volume rocker. The top has the headphones jack and the power button. The rear houses the camera in one corner along with the LED flash. The position of the camera isn't ideal as your finger may come in the way at times. The Gionee ELife E6 runs on Android 4.2 Jelly Bean but the device comes with its own custom UI. This is evident from the lock

screen itself. All the apps are listed on the home screen itself – very iOS in nature. Another thing the E6 borrows from iOS 7 is the way in which you kill running apps.

The Gionee ELife E6 also has a bunch of gesture controls that we have seen on other Android devices. Its full HD display is vibrant and great for multimedia content consumption and gaming. As a phone the device works well. The performance of the camera is average at best. In well-lit situations shots are good. In low-lighting however, there is a

lot of visible noise.

There's a lot to like about this phone. But at its price point, the Nexus 4 and the Samsung Galaxy S3 are definitely better.
