With its aluminum build, the Micromax Canvas Turbo looks like a premium device. The rear of the smartphone is in one piece, which means that you don't have access to the battery. There's no microSD card slot.

Its rear has a dark blue finish that we liked. The Micromax specific apps on the smartphone includes M!Live which gives you access to local Indian content such as ringtones, wallpapers and more and M!Unlock which gives access to the "blow" or "shake" to unlock feature, one that was introduced with the Canvas 4.

With the Canvas Turbo, Micromax has introduced a feature called ifloat. The app gives you the ability to easily access the most frequently used apps

₹19,990

from anywhere on the device. No need to come back to the home screen or the apps listing page.

The display of the Canvas Turbo, at full brightness is very vibrant. The 5-inch full HD display is great for consuming multimedia content.

Surprisingly, the native video player crashed when we ran AVI files on it and that's a bummer. We have seen the same problem occur on the Canvas Doodle 2.

The keyboard on the smartphone is stock Android and there is enough display real estate for you to have a comfortable typing experience. Browsing the Internet, reading books, etc. all was a pleasant experience. A good phone, overall.

BlackBerry Z30

A BlackBerry phone for the future

The BlackBerry Z30 is a very good smartphone, there's no doubt about it. BlackBerry has very smartly packaged the software and hardware keeping in mind the needs of a typical BlackBerry user while throwing in some new things like the 5-inch display and a quad-core GPU. And therein lies the problem. When confined to former and current BlackBerry users, the Z30 is a phone worth recommending despite its drawbacks but when the boundaries of that universe are broken down to let in all the smartphones, things don't look good for the BlackBerry. Phones like the Xperia Z1, the LG G2 and the Galaxy S4 offer more and do many things better than the Z30 (for e.g. better displays, more

powerful hardware, better app ecosystems), and those things may ultimately matter to buyers without a bias towards BlackBerry.

So, to sum it all up, buy the BlackBerry Z30 if you are or have been a BlackBerry user and are looking to stay with the company. If watching movies or having the latest apps come second to using social networking and messaging apps, and you aren't already invested in any other mobile OS, in that case too, the Z30 will suit you. For the rest who want the latest apps and the best possible multimedia and gaming experiences on a smartphone, there are better alternatives.
