ASUS R9 280X Direct Cooling Top Edition 3GB

AMD hits back with better performance at a lower price

AMD's back in the fray with new cards featuring newer technology and a new die. Alas, this one right here isn't one of them. Most of the new R9 and R7 cards are simply rebranded Tahiti GPUs. This one in particular is a rebranded HD7970. ASUS on the other hand has worked their magic with another custom PCB graphics card. While this one features a 970 MHz GPU

Price
₹22,000

clock with a turbo boost of 1070 MHz it still outperforms every 7970 out there.

Quite simply because a stock R9-280X is clocked at 850 MHz so this card here has a base clock boost of 120 MHz. Even the memory clock is boosted by 150 MHz which is somewhat necessitated given the massive core clock increment.

Again, ASUS' Direct Cooling II technology helps maintain a low working temperature despite the maximum power consumption of 300 Watts. We managed to get it up to 72 degrees celsius at max load and it stayed at about 38 degrees while idling and there was hardly any noticeable noise at max load.

Performance wise this card beats the high end HD 7970(s) with ease. Even the best HD7970 we ever received with a similar overclock was beaten by this card. What actually matters here is the price at which the card sells at, roughly ₹10k lesser than what high end HD7970s retailed for. Even to this day this card is a better choice than any HD7970 selling currently.

Lenovo A1000

An underperforming tablet with good speakers

Price
₹8,099

The rear of the tablet has a plastic finish making it run of the mill in terms of design. The tablet boasts of front facing dual-speakers, which sound really good. It has a comfortable form factor for prolonged use. The UI is stock Android. The performance of the A1000 is sub par when compared to other offerings in the same price range. The display is washed out and isn't great to consume content on. The tablet lasted for a little under 4 hours in our video playback test, which is less when compared to the competition. For a sub 10k budget, you have better alternatives.

ASUS FonePad 7

An Android tablet with calling capabilities

Price
₹17,499

The Asus FonePad 7 is a direct competitor to the Samsung Galaxy Tab 3 211. The tablet has some pretty interesting features such as Floating Apps, which let you access multiple apps in small windows on the display. The tablet also shows the ability to run heavy-duty apps smoothly and make calls. In our battery test the device lasted 6.5 hours, which is at par with the competition. The stereo speakers make gaming and multimedia consumption a treat on the FonePad 7.
