The Acer Aspire P3 is essentially a tablet with a detachable keyboard cover that turns it instantly into a small laptop. With 11.6 inches of screen real estate, the Acer P3 isn't too big when considering the form factor, but it does clock in at a slightly thick 0.7 inches, safely taking it away from the tablet zone.

As far as the display goes, we felt that it was just about average, seeing how it lacked vibrancy and the viewing angles weren't very generous either. The tablet stutters a bit when playing back full HD videos, but it's nothing too major. Don't expect to run Photoshop or Lightroom on the P3, as it is more of a daily light routine machine than a workstation.

Price
₹74,499

One major issue we had with the P3 was the keyboard cover. Acer has clearly gone for a very Surface-like look for it, but the keyboard cover is just not built well enough. The cover is actually bendable, with no actual mechanism for locking the P3 in place on the keyboard. This causes the tablet to tip over every now and then, which can be quite frustrating. The keys on the detachable keyboard are smaller than we'd like so typing on the device will take some getting used to. At ₹74,499, the Acer Aspire P3 is expensive and though the product has its advantages, but it doesn't feel well-rounded.

Olympus OM-D E-M1

Pure performance packed in a sturdy, well-built shell

The E-M1 is a redesigned successor, despite the confusing naming scheme, to the OM-D E-M5, Olympus' mirrorless crown. While it still has a 16 megapixel (effective resolution) sensor, it gets a new image processing chip, the TurPic VII processor. The sensor itself has on-chip 37-point phase detection and an 81-point contrast detect AF system. Ergonomically, it's hard to find a mirrorless camera in the market that fit so beautifully in our hands. One handed operation with the E-M1 is actually quite easy, something that is counter-intuitive to the size of this thing.

The touchscreen on the E-M1 is incredibly accurate and fast, which makes shooting with the camera a whole lot easier. Right out of the camera, the images are

extremely good with strong contrast and a saturation level that would please pretty much anyone. However, if you like to tone your own images, the E-M1 will allow you to tweak the contrast and saturation to your own liking.

Price
₹1,05,000
(body only)

The AF performance of the E-M1 is actually quite good. You can either choose an AF point from the 81-point grid, or you could just tap anywhere on the screen and the E-M1 would fire off the shot before you can even pull your finger away. It is THAT fast. The E-M1 is a mirrorless camera that surprises at every turn. It's big, but incredibly easy to use even with one hand. It has a small sensor, yet delivers performance as good as an APS-C sensor.
