# Epson EH-TW5200

Performs admirably, priced aggressively

**T**he EH-TW5200 home entertainment projector from Epson is a sub-1 lakh rupee device aimed at "budget" customers, and comes with all the bells and whistles

expected off a self-respecting multimedia entertainment projector.

The EH-TW5200 is quite portable at 2.8 kg and very easy to lug around. What's more, its white enamel shell with a glossy piano finish makes it appealing on the eye.

The projector's plastic exterior feels well put together, there aren't many moving parts, and the build is very good overall – with the exception of its front stand, which is mildly flimsy.

If there's one thing the Epson EH-TW5200 has in abundance is its wide array of features. And its menu item list goes on and on – password pro-

tected access, individual colour adjustments and faster image processing, to name a few.

The projector's quite bright and sharp, displaying a crisp, well-defined image on a white

screen in both a completely dark room and a well-lit room. Watching both Full HD 1080p movies and high bit-rate Blu-ray rips is handled very well by the projector, with absolutely no ghosting or visible moire, and impeccable colour

consistency. Text readability is also very good on the Epson TW5200. The bundled remote control lets you access a lot of one-click features conveniently. We wish the projector ran a bit cooler, and its inbuilt speakers aren't very loud, but that's about the only complaint we have from it.

# Cooler Master Ergostand Lite

Built well, runs quiet, does what it claims

**W**e were mighty impressed with the Notepad U, and the Ergostand Lite is cut from the same cloth. It's smaller in width, able to accommodate only a 15-inch or a smaller form factor laptop – consider something else if you have a 17-inch laptop. But what it loses in width, the Ergostand Lite more than makes up for in build quality. It has a metal mesh top to place the laptop on and rubber stoppers to secure the machine in place – and they do the job quite well. The stand has five adjustable positions to let you choose the best one for your usage.

In terms of performance, the stand's 160mm fan is fairly quiet at max speed. It has a sliding mechanism to manoeuvre it within the stand's mesh

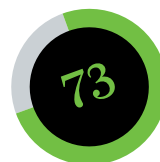

to your laptop's exact hot spot. Cooler Master has also included a fan control slider near the ports that helps to increase or decrease the fan speed as you see fit. On full load, with maximum CPU and RAM utilization, the Ergostand Lite managed to reduce CPU, motherboard and HDD temps by 7, 6, and 3 degrees, respectively. It did a marginally better job while the system was on idle, shaving 7, 5, and 9 degrees off the laptop's CPU, motherboard and HDD temps, respectively.

Not quite the best stand we've tested this, but at only ₹1,900, it's still a very well made laptop stand with well thought ergonomic features and is worth checking out.
