

Space age

What kind of exotic space ship designs will let us truly reach for the stars? Read on to find out.

From the labs

Humanity's constant quest to conquer nature goes onto greater heights

ERUDITION

Being a technology magazine requires catering to more than just the regular tech geek; for there can be no technology without the great minds that dared to dream up the ideas that we consider part of modern science today. The greatest (and truly coolest) things that science has done for us have been, on some level, the wild fantasies of people who either had the foresight to see what mankind was capable of, or had the vivid, insane imagination to imagine the impossible as plausible. Our newest section 'Tales from the Void' deals with fiction – of the scientific kind.

Feliça Legado!
