Note: *For better results use glass with over 8mm thickness. It even works on glass with 4mm thickness. Glass must be with some dust / natural dirt. Pure cleaned glass may not allow mouse to work. The sensor of the mouse reads the clean areas of glass as dark background with bright dots (dust), and then the sensor interprets the movements of these dots to work exactly where you have moved the mouse. It tracks dust and other residuals that appear on the surface. Blue Eye mouse works virtually on every surface but because it requires micro-details like dust to work, it may not work or perform best on glass that is perfectly cleaned.
