After Heartbleed and Shellshock comes the Poodle Bug. Read more about it in our Security Watch section.

One Handed Keyboard

If the iPhone 6 Plus is too big for your hands, type using the one-handed keyboard from Stonelight Pictures <http://dgit.in/1HandKeyb>

Mobile watch

If one screen wasn't enough

and Bluetooth 4.0. It runs on Android 4.2.2 Jelly Bean.

"YotaPhone features an electronic paper display that would work as a second screen, making it possible to deliver an array of new and improved user experiences," explains Abdul Karim Sawan, Vice President for Yota Devices – Middle East and India. "It combines a smartphone and e-reader into one device for those who enjoy reading on-the-go even in the brightest sunlight. You can save images and information on the second screen, and it stays there, even if you lose battery power. You can save anything on the always-on display from a map to a boarding pass. Information, like a missed call or meeting reminder, stays on the always-on screen until it is no longer needed."

"Our partnership with Flipkart on behalf of Yota Devices marks a new milestone for

Jumbo, as we go beyond the Middle East and offer our capabilities as a trusted distributor to a high potential market such as India. YotaPhone has proved to be a huge success in the Middle East region, and we expect Indian consumers to see great value in the device. Official figures show that online retail shopping is growing at 15% annually, with Flipkart being the largest and most visited e-commerce marketplace in India. We believe Flipkart will be a great platform to launch the YotaPhone, and reach a strong consumer base in the most efficient manner," says Ajay Pathak, Head-Mobility & Solutions at Jumbo Electronics.

Phone a Facebook Friend?

The recent meeting between Facebook CEO Mark Zuckerberg and Samsung Electronics vice chairman Lee Jay-yong in Seoul has triggered rumours that the two companies are in talks over possibility of a new Facebook phone.

According to rumours, Facebook is looking for a hardware partner to develop a new Facebook phone. Samsung is among top hardware partners the social networking giant is considering. Speculations also suggest Facebook may be looking for deeper integration on the Samsung

devices. It can be noted that Facebook's last phone – the HTC First, which featured Facebook Home software layer on top of Android – didn't succeed. The HTC ChaCha, another Facebook-centric phone, featured a physical Facebook button for quickly posting to the social network. However, both the devices didn't take off.

It's not the first time Samsung and Facebook are working together. Samsung's much talked about Gear VR headset

Priced at ₹6,599, the new Xolo One supports dual SIM, runs Android 4.4.2 KitKat (upgradable to Android 5.0 Lollipop) and is powered by a 1.3 GHz quad-core processor and 1GB of RAM.

The Xolo One has a 4.5-inch screen with 480×854 pixels resolution. It has a 5MP main camera and a VGA front facing camera. The smartphone comes with 8GB internal storage and supports additional storage up to 32 GB via microSD.

Will the Facebook phone work out this time?

has been created in partnership with Oculus, which is now owned by Facebook. It will be really interesting to see what a Samsung-made Facebook phone will offer to users. Will it be competing against Google's Android One project?

Xolo gets a lollipop

Xolo has launched a new budget Android smartphone.

For connectivity, the Xolo One supports Wi-Fi 802.11 b/g/n, Bluetooth 4.0 and USB 2.0. The smartphone is powered by a 1700mAh battery.

The new Xolo One phone will be competing against the newly launched Android One smartphones as well as other budget Android phones in this price range. Like the Panasonic T40 and Huawei's Honor Holly. 

**Never choose a smartphone
without knowing about its screen.**
