

Just type any currency you want to convert and search will convert it within a fraction of second

load any document in Preview or using the Markup on Mail app -> Click on signature button -> Select Trackpad -> Create your signature.

Use Spotlight search as currency converter

The scope of Spotlight search is not local anymore. It can be used to perform search over the Internet as well. With this happening, you can perform many actions right from your desktop. One such task is currency conversion.

Just go to the Spotlight search and type "1 USD to INR" and it will come up with the result. Handy, isn't it?

Close Safari tabs on other iOS devices

The 'Continuity' feature introduced in Yosemite is very useful if you don't stray outside Apple's ecosystem. With this feature, you can do the same task from multiple Apple devices without interruption. To make the most of this feature, you can use it to close Safari tabs - that you maybe don't want family members to see - currently running on another iOS device.

To use Continuity, you need to be logged in to the same iCloud account on both the devices. If this is your cup of tea, then head over to Safari and

go to the tabs view. There you'll see all the tabs that are currently running on Mac as well as your iOS device. Just close whichever you don't want.

Use hot keys to move the dock

The dock (usually residing at the bottom of the desktop) can be moved to the left or right by using hot keys. To do it, press [Shift] while clicking the divider bar on the dock to move it to either side of your screen.

Selectively delete Safari history

Safari lets you delete history selectively in Yosemite. Earlier, it was a boolean affair i.e. all-or-nothing. Now you can choose whether to delete history from the past hour, the day before, 48-hours before, etc.

Be untraceable with private windows

Safari in Yosemite has added 'DuckDuckGo' as another search option along with

Click the magnifying glass, select DuckDuckGo and start typing in the address bar

Google, Bing and Yahoo. DuckDuckGo is a search engine that doesn't track you, thus, helping maintain your privacy.

To use it as your default search engine (in place of Google), click on the magnifying glass to the left of the address bar and select 'DuckDuckGo' from the list.

Place and answer iPhone calls from Mac

Another newly introduced feature in Yosemite, 'Handsoff' lets you place and answer iPhone calls from your Mac. With this feature, you'll never miss any calls if you're working on your Mac and your phone is away from you.

To place calls, you need your iPhone and Mac to be logged in to the same iCloud account. In addition to this, both should be connected to the same Wi-Fi network. Now that being done, open FaceTime app -> Log in to your account -> navigate to FaceTime Preferences -> Check 'iPhone Cellular Calls'.

Send and receive SMS from Mac

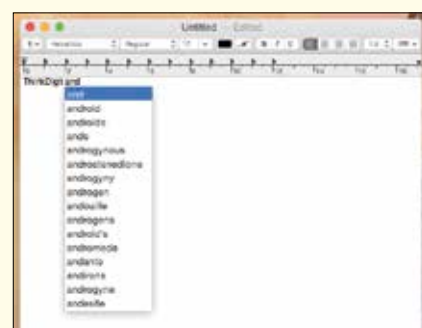

The Handsoff feature extends to send and receive SMS as well. Make sure you satisfy the prerequisites, and then from your iPhone go to Settings > Messages > Text Message Forwarding > Enable it for your Mac. Doing this

will show a verification code on your Mac. Enter the displayed code and tap 'Allow'. That's it! Now, you can send and receive text messages from your Mac.

Use iCloud Drive as a Dropbox alternative

iCloud Drive is Apple's answer to Dropbox, Box.in, OneDrive and other cloud storage services. iCloud was initially aimed at syncing iOS and Mac application data, however, Apple extended its usability to store other user files as well.

Yosemite comes integrated with iCloud Drive. You can

Hitting ESC will suggest the next word. This can sometimes be redundant

locate it in the Finder menu. Just sign in to your iCloud account, and drag and drop files into your iCloud Drive. They'll automatically be uploaded.

Use Quick Type anywhere

Apple has introduced the iOS 8-like QuickType feature in Yosemite as well. This feature shows suggestion for the next word to be written. For this to work, you must be writing in an Apple app. While writing, just press the [ESC] key and it will bring up suggestions for the next word.
