

secrets, features, tips and tricks to make you a pro at using Microsoft Outlook.

Adding Personal Email

Although Outlook is predominantly used for work emails it is always handy to have your personal email account added to your work system as well. To add your personal email to Outlook - whether it is Yahoo or Gmail - all you have to do is go to the File tab and select the Add Account option. This will open up the Add Account wizard which will guide you through the rest of the process. In this wizard the most important thing to note is that instructions from your email service provider regarding POP or IMAP email access procedures. However if you are using Outlook 2013 with Outlook.com then all you need to do is input your email ID and the program will take care of the rest. You can also access Outlook.com from older version of the Outlook client by clicking on the "Manually configure server settings..." option wherein you must select Microsoft Outlook Hotmail Connector. This is impor both your email along with your personal calendar from Outlook.

Adding Google Calendar

Since most people rely on the free Google services on their mobile devices for calendar event planning it makes sense to import your Google Calendar to Outlook as well. This must be done through Google Calendar where in the left hand panel

you need to click on the drop-down menu that gives you the Calendar Settings. Here select Private Address > ICAL to obtain the iCal URL of your calendar. Now switch to Outlook and goto File > Account Settings > Account Settings... where selecting the Internet Calendars tab will give you an empty field in which you need to paste your iCal URL. The calendar will take a little time to sync and will be imported to Outlook. You can also do the reverse process of having your Outlook calendar imported to your Google Calendar but that requires third-party tools such as gSyncit which in its free version limits you to one Google Calendar to one Outlook Calendar syncing.

Schedule Email Dispatch

Maybe you need to have an email sent at a specific time and aren't in a position to wait until then. No problem - just schedule the email to be sent at your desired time and you don't even need to be on your

Variety of custom options for scheduling available.

machine. Just type out the email that you wish to be sent and then switch to the Options tab and click on Delay Delivery. This option presents you with an options menu where you can make your custom selections in a "Do not deliver before:" option where you can enter the date and time. After making your selections click Close and then click on the Send button. The message is then marked for delayed delivery at the time and date of

your selection. If you're working from a Microsoft Exchange server you can proceed to close the desktop with Outlook on it but if you're working off POP or IMAP then the application and the machine will need to remain online until the time of the scheduled delivery.
