

section of text content that you need to send out. Such frequently used default messages can be saved as Quick Parts, saving you the need to either type out or copy-paste the text from another file. All you need to do is highlight the text that needs saving from the composer window and then switch to the Insert tab. Here click on the Quick Parts dropdown menu and choose “Save selection to Quick Parts gallery”. This adds the text to your type detection so that when you begin typing the same message again Outlook sends it on your screen as a pop-up where you just need to hit the return key and it will be inserted into your mail. Another way of inserting the text from Quick Parts is to select it from the Quick Parts dropdown menu.

Filter Emails

The Filter Email option is also a useful means of finding specific emails from your inbox. The drop down menu for this can be found on the extreme right side of the Home tab. Selecting any of the menu options will immediately filter the mailbox down to show only specific types of emails based on your selection. To look further into the search results you can

just begin searching from the Search bar. The search options can be changed from the Search Tools tab which can be activated by selecting “More Filters” from the dropdown menu where additional settings and options like “Recent Search” list also appears making it easier to repeat an often look for term.

Common Search Folders

If you find yourself searching for a term quite frequently in your inbox search options then using a Search Folder is a helpful trick. To do so go to the Folder tab and select the New Search Folder option to create a new Search Folder. At this point you will be presented with a variety of templates which can orient your folder by certain attributes like mails from specific people or mails marked important. You can even create your own custom template based on your search category by using the “Create a Custom Search Folder” option. This new folder will now appear in the left window pane of the Outlook window inside which you will be able to see all the emails that conform to your selections. You can rename this folder anytime you like with Right Click and Rename Folder option as well.

Multiple frequently used filters already available.

Digital ID required to use encryption and digital signatures

Cryptographically Yours

In situations that demand security and confirmations so that your recipient knows that the email is genuinely from you Outlook has an option for cryptographic signatures in the emails. The same option allows you to encrypt the body of the email and the attachments along with it so only the recipient who has the the key can open them. To do it you need to go to the Trust Center Settings which can be found via File > Options > Trust Center. Here just click on Email Security and enable digital signing and encryption by ticking of the boxes. This would require you to create and import a digital

ID which can be gained by clicking on the “Get a Digital ID” button which will direct you to a number of providers.

Grouping Messages

In office jobs the amount of email received can vary and often lead to hundreds of emails per day from all sorts of sources. The process of managing all this incoming mail is a productivity nightmare. In order to make the inbox well organised and emails easy to find the option of grouping messages can prove very useful. This option can be implemented on either a single mailbox or across all your mailboxes on a need basis. To
