

do this first go to the View tab and tick the box next to “Show as Conversations”. Then click on the “Arrange By:” menu bar at the very top of the message list and make the selection of “View Settings...” from the dropdown menu where you can make further customisations to the grouping options as per your needs.

can also have unimportant (but not junk) instantly deleted by choosing the Ignore option. This will not block the source from reaching you but new emails in the Ignored conversation thread will be put in the bin as soon as they arrive saving you tons of time and trouble.

Tasks in Quick Step

You can also automate Outlook to perform frequently used tasks such as inviting a number of contacts to a meeting or forwarding an email to a specific contact. Quick Steps is a great way to save time and have these routine tasks taken care of without worry. In the middle of the Home tab you can see the presets of the Quick Step options but you are free to set up custom task routines as well. To do so click on the drop down arrow next to the option and select “New Quick Step” button. Here you can create a customised sequence of steps and actions that can flag, move, categorise and delete messages at an instant. By clicking

Quick Steps improves productivity radically

parameters of what you consider junk mail. Using this feature you can block out specific people or web domains or whole countries from which you are receiving the junk mail. You

on the “Manage Quick Steps” option you can access the dialogue box where you can even edit and duplicate your shortcuts to create a variety of task routines as you require.

Numerous Rules and Formatting options to choose from

Automatic Clean Up

Over time we find that emails pile up year over year, with one conversation continuing along multiple threads. In order to save space and neatly organise your inbox Outlook has a Clean Up tool which can do wonders. The Clean Up tool goes through each email conversation in your inbox and deletes the ones that have been quoted in their entirety within another subsequently sent email. This means that the old messages that are left remaining while the older mails are deleted off the system. Since the content of the older mails is anyway present within the new mail the need for redundancy isn't high. To use this Clean Up option go to the Home tab and click on

the Clean Up menu to affect a single email thread or an entire folder. This opens up an alert window where the Settings option lets you choose what types of messages should be filtered and deleted and which ones shouldn't be disturbed.

Using Rules and Conditional Formatting

Another feature of Outlook that can radically make your inbox more easy to manage is the Rules option. The Rules menu can be found in the Move section of the Home tab and allows you to create and administer the “rules” by which all incoming emails are automatically processed as they arrive. When selecting an email prior to clicking it will offer you the option of transposing the same
