

Railgun on Army vehicles

Railguns always bring in the glory be in movies or games, and BAE systems want them in future army vehicles

Smarter solar panels

A new solar power system is easy to install and which configures itself, performing safety checks. <http://dgit.in/EasySolarP>

LIFX

We've all switched from incandescent to CFL to LED lightbulbs, but that hardly makes any of them smart compared to Lixf, a lighting device unlike any you've seen so far. It connects over Wi-Fi and can be controlled by a smartphone app. Not just that, the Lixf lightbulb can be programmed to fade-in, fade-out light or colour transitions, and asked to automatically adjust brightness depending on the time of the day. What's more, the lightbulb is good for up to 40,000 hours of usage, or 27 years (if used for 4 hours per day)!

August

In the world of smart locks, which is still at a fledgling state, August stands tall and proud. An ordinary looking device with extraordinary powers, one that promises to reduce several keys in your keychain. With 128-bit AES encryption, this lock protects your keys as well as the physical door to your house through a bolt that only opens if a paired phone is within Bluetooth range. Keys can be generated and distributed to family members or guests who have the compatible app on their phones to gain access to your August smart lock protected property. Alternatively, if you want to control the lock beyond Bluetooth range, it has the capability to join a compatible smart home hub to let you do that. Ain't that sweet?!

Ubi

This is essentially a palm-sized voice-operated computer that plugs into any power socket and pairs with your home Wi-Fi to give you a taste of what the future of computing promises to be. With a 1.2GHz dual-core Cortex A9 processor running on Android 4.1, this tiny computer – which is the work of just three engineers from Toronto – is capable of performing searches, schedule alerts and alarms, even sense environmental conditions in every room thanks to its built-in temperature, light, pressure and humidity sensors. Supported smartphone apps let you tinker and tweak the device's settings to tailor your needs. The possibilities are endless.
