

MEET THE WORLD'S CHEAPEST COMPUTER

Dubbed C.H.I.P., it's slimmer than a

credit card, is capable of browsing the web, editing documents, and playing simple games. How much does it cost? Just \$9! Is the era of Raspberry Pi over? <http://dgit.in/cheapchipp>

BREAKING THE COSMIC SPEED LIMIT

Science fiction has created "warp-drives," "hyperspace," "subspace," and other tricks that have become so commonplace that we don't give them a second thought. However, Robert Scherrer, Professor and Chair of Physics and Astronomy at Vanderbilt University, believes it is far from reality. <http://dgit.in/rvderyet>

WHAT MAKES US UNIQUE?

Genetically identical fruit flies raised under the same conditions are helping scientists create a biological map of what makes individuals unique. Scientists found their behaviour varied much more than expected. Are we all a consequence of randomness then? Read more here: <http://dgit.in/definemee>

THE LAWS OF SPACE NOT PHYSICS

The international community has actually come together and written regulatory guidelines for space exploration and laws that keep the final frontier from turning into the Wild West. If it weren't for these laws imagine what we petty humans would've done to the great beyond? <http://dgit.in/emptylaws>

The 11 most useful Chrome extensions you should install

Here's a list of useful extensions that will help you make Chrome into much more than a simple Web browser.

– By Nikhil Pradhan

Over the past year or so, you must have noticed how important the Chrome browser has become in your daily life, both at work and home. Even if you don't use Chrome or an Android phone, chances are those around you, do. Chrome currently has a grasp on about 25% of the desktop browser market, second only to the behemoth that is Internet Explorer.

As Chrome expands its user base, it has also gained the attention of multiple developers who have created thousands of handy extensions that greatly increase the utility, usability and scope of what the browser can do and what you can do with it.

Here are 11 such extensions that do exactly that. Blip these pages to get shortlinks.

1 The Great Suspender

The biggest complaint that users have with Chrome is that it's a memory hog and even if you're the biggest Chrome fan on earth, you can't ignore that particular issue. This becomes a much more serious issue if you are a tab hoarder, i.e. you always have more 10 to 15 tabs open all the time, and your system always feels slow because of Chrome.

The Great Suspender is an extension that suspends tabs that you've not used for a predetermined amount of time (by default, that time is set to 1 hour) and clears up system memory. I've been using The Great Suspender for about two weeks now

and thanks to the extension, it literally feels like I have a less crappy office PC.

2 uBlock

You don't need me to tell you that using an ad blocker makes large portions of the Internet infinitely easier to bear. While Adblock Plus (ABP) is the most popular ad blocker extension for Chrome, it's also quite heavy in terms of memory usage. There's also the deal with ABP's whitelist, a list of ad sources that the extension doesn't block by default because it deems them 'acceptable' and 'non-intrusive'.

3 Pocket

Sure, Chrome has a built-in bookmarks manager but the less said about it, the better. Instead, try out Pocket, a popular extension that you can use to quickly save pages for reading later. One of the best features of Pocket is that it offers a tagging system that lets you quickly add tags to saved pages. This really helps in keeping your library of saved pages organised and I've been using it, when writing longer stories for Digit, to keep track of my research.

Pocket also has an app for both iOS and Android which means that you can access (and save to) a central repository of saved content both on your phone and desktop.

4 LastPass

Chrome's save password feature may help you easily remember passwords for

different websites but it doesn't offer much in terms of practical security. Theoretically, the passwords database in Chrome is protected by your Windows user account password, but how many of us actually put any thought into our Windows passwords?

LastPass has been around for a while and offers a much more secure way to store all your passwords. LastPass prompts you every time you register on a new website, allows you to pick from lists of randomly generated strong passwords and lets you quickly log into any website with the click of a button. All you need to do is to remember one master password.

LastPass also has apps for iOS and Android but if you want to use the service on your phone, you'll have to pay up.

5 Google Art Project

Google Art Project may not be a particularly useful extension but it does do wonders to improve the way Chrome looks. If you've installed the GAP extension, every time you open a new tab, you will be greeted by an art masterpiece from great artists like Vincent Van Gogh and Shin Yun Bok. Nothing like a little bit of culture to start your day.

6 Momentum

Momentum, like Google Art Project, is an extension that changes the way a new tab looks in a positive way. However, unlike Google's extension, Momentum shows
