

THE CASE FOR VIOLENT VIDEO GAMES

Americans have long been drawn to the idea that violent movies or video games can provoke actual delinquency or serious crime. The columbine incident didn't help dispel this either since both students involved were huge fans of Doom. But there's hope. Read on to find out why violent games might actually be good.

NISSAN'S 1250 HP MONSTER

When it comes to manoeuvring a superfast (200 mph+) racecar, auto engineers tend to prefer rear-wheel drive for handling and weight distribution. Nissan's new GT-R LM Nismo may turn that notion on its head. Find out how it was built:

IS REDDIT TRYING TO UP ITS ACT?

Other than broadly geek-approved tenets like "Privacy is good" and "We like net neutrality", Reddit has never been overtly concerned with being "proper". It's where GamerGate and The Fapping started. So when Reddit released its "core values" manifesto, many wondered what was going on.

photographs and quotes instead of artwork and also displays some information such as weather, tasks and favourite links. Momentum also gives you some freedom in customizing the way you want your new tab to look.

7 Google Dictionary

As Google Art Project showed, Google has also built some great extensions for its Chrome browser. One of them is Google Dictionary, a handy tool that quickly gives you a definition for any word you may find on a website. After you install the extension, when you come across a word that you want to define, just double click the word and you'll get a small yellow pop-up with the definition. If you want a more comprehensive definition, then just click the extension icon next to the Chrome URL bar.

Google Dictionary extension at work.

The Google Dictionary extension also serves as a reference guide and can give you definitions and explanations for any proper nouns, abbreviations etc., as well.

8 PushBullet

PushBullet is one of the handiest extensions that I've come across. What it does is push notifications that you get

on your phone to your desktop so that you don't have to look away from your PC every time you get an SMS or a Whatsapp message. You can mute these notifications and act upon them to a degree based on the app sending the notification. For instance, if you get an SMS or a Whatsapp message, you can reply right from the desktop notification; on the other hand, if you're using a third party email app, you can mark emails as read or just mute the app altogether. You'll also get notifications about the songs currently playing on your phone, something I personally find very handy.

To use Pushbullet, all you need to do is install the extension in Chrome and install the app on your phone. The rest should take care of itself.

9 ProxMate

While Indian Internet users can access a huge swathe of the Web, there are certain sites and services hidden behind geographical restrictions. ProxMate ensures that if you're a Netflix or a Spotify fan from our shores, you can access them without issues. ProxMate works a little bit differently than other VPN services because it requires you to install modules for individual services and websites you want to access. Once you do that, you should have no problem listening to the latest music on Pandora and Spotify or watching the latest episode of Daredevil on Netflix.

Install Pushbullet to forget your phone for a while

10 Hola

Hola, like ProxMate, is a VPN extension that lets you access geographically restricted content on the Internet. However, unlike ProxMate, Hola works without installing any modules and you can use it to access sites immediately.

The downside to Hola is that it may result in a security or privacy risk for you because of its P2P nature. As a result, it lets other users utilize your connection to access content blocked in their respective countries. I'd personally suggest you use ProxMate unless you're okay with the risk that using Hola entails for the 'one-click' ease it brings.

11 Streamus

Staying true to the adage, "Save the best for last", I give you Streamus, a Chrome extension with a neat, streamlined interface that lets you listen to music from YouTube videos without actually opening YouTube or playing the video. Streamus also lets you create playlists and save them, which means that this is one extension that everyone should have installed.
