

Wind turbines without blades!

A Spanish Company called Vortex bladeless has proposed a method of harnessing wind energy in a new way. Read more: <http://dgit.in/1HmZr8x>

Microsoft to buy Blackberry?

Reports of Microsoft acquiring Blackberry are making the rounds again. <http://dgit.in/1bZIXYD>

HTC Desire 826

Jack of all trades, King of none

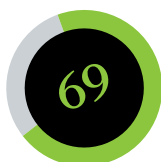

The HTC Desire 826 is pretty similar in terms of design and build quality to other HTC Desire phones we have seen recently. It has a plastic build which combined with the slippery back is not very reassuring. But so, there is no denying it that the 1080p 5.5-inch display is one of the best 1080p displays in its segment. The display is bright and easily visible under direct sunlight. Coming to the UI, The new Sense UI 6 offers a theme manager over Sense UI 5.

Going over the performance, the phone had no issues handling day to day tasks or even graphically intensive games. But per-

longed usage made the phone heat up and made it uncomfortable to hold. Simultaneously, speed throttling would kick in and one could see lags and stutters creeping in. Battery performance is also not up to the mark either and performs below my expectations.

Like the Desire 820s we expected a good camera but that isn't the case with the Desire 826. Each and every picture I took with the camera showcased the same problem - over-saturated colours and lack of focus. And when the camera did focus, I found the contrast levels higher than expected. In conclusion, the HTC Desire 826 is not the best phone in its category and exists only as an option like every other Desire phone from HTC.

ECS Z97I-DRONE

Good things come in small sizes

Price
₹8,995

When it comes to Mini-ITX motherboards there are very few ways you can squeeze in all the requisite features onto the limited real estate. Often, we can see close similarities between different manufacturer's approach towards component layouts. For example, Gigabyte and ASRock follow very similar layout styles. The same can be said for ECS and MSI. ECS' Z97I-DRONE is one

of the few Mini-ITX motherboards that one can find in India. It doesn't

have an elaborate heatsink like some of the other boards but the one on the board is sufficient for the 5-power phases that it has.

Mounting a Mini-ITX board can throw up some issues with regards to cable management since the CPU ATX power connector and the SATA data cables are situated at the top left section which is generally farthest from the drive cage in cabinets. But these things are a non-issue since cases designed for Mini-ITX boards follow a top-down cabling approach. So SATA slots pointing upwards are actually preferred. Competing brands generally provide a Wi-Fi / Bluetooth PCIe card with antennae mounts on the board itself for a price bump. The Z97I-DRONE gives you the freedom of picking a Wi-Fi/BT of your choice and mount it on the M.2 slot. Unfortunately, this slot doesn't support storage media. On a side note, we found that the motherboard's documentation has instructions in Hindi, a welcome move.
