

Fujifilm unveils the 'past'

Fujifilm has launched the X-T10, which looks every bit a vintage camera, and easy on your wallet, too: <http://dgit.in/1FsPqsK>

Fun Fact

One can toast 1,00,000 pieces of bread from the energy of a single lightning bolt. <http://dgit.in/1IGIpVX>

Bose Soundlink III

Power at a Price

"warm" and "rich". The speaker has a definite bias towards the lower-end of the spectrum but unlike many other similar speakers, it manages to combine punch and

expansiveness. When it comes to acoustic tracks,

I found that although the vocals were clear and distinct, the instruments tended to disappear into the mix. When it comes to genres like metal and rock in which songs tend to have many instruments in the mix along with the vocals, all of which demand focus, the Soundlink III falters. While the bassline and the primary vocals stand apart, the vocal harmonies and guitars get drowned in the mix.

To sum it up, the Bose Soundlink III is a very loud speaker that does justice to music with a bass focus and limited instruments but has some problems when it comes to other genres.

The Soundlink III's battery was also able to last for 15 hours before switching off automatically.

There's no denying that the Soundlink III is a quality product with impressive performance but there's also no way to ignore its price-tag. If you don't want to spend as much and are okay with a slight dip in power, look at the excellent Creative Sound Blaster Roar. If money is not a concern, then the Bose Soundlink III won't let you down.

Price
₹22,400

The Bose Soundlink III looks understated and utilitarian which, at 1.3 kgs, is relatively heavy as well. Overall, the Bose Soundlink III is well-built and has a very business-like design that's all about functionality and utility.

This is a loud speaker, in fact, one of the loudest that I've reviewed, and it stands right alongside the much larger House of Marley Get Up Stand Up. When you start playing music over the Bose, the adjectives you'd use to describe the sound quality are

Performance.....	78
Build & Design.....	62
Features.....	76
Value for money.....	65

Specifications

Bluetooth Support: A2DP (stereo);
Controls: Volume, Mute; **Internal Battery:** Yes; **Battery Type:** Rechargeable; **Weight:** 1.2 kgs;
Warranty: 1 year

HTC Desire 820s

Desireable but not desirable enough

HTC is one of the few companies which has its own distinctive design language and it shows in the Desire 820s. The dual-tone colour setup gives it a very distinctive look among its competition, and you definitely can't miss it in a crowd of good looking gadgets. From a build point of view the smartphone's slim profile and the slippery back may require users to purchase a cover. That said, the phone felt sturdy enough during my use and will do just fine if you are careful with its handling, and not doing any funny business.

The 5.5-inch HD display on the phone is good and also gets Gorilla Glass 3

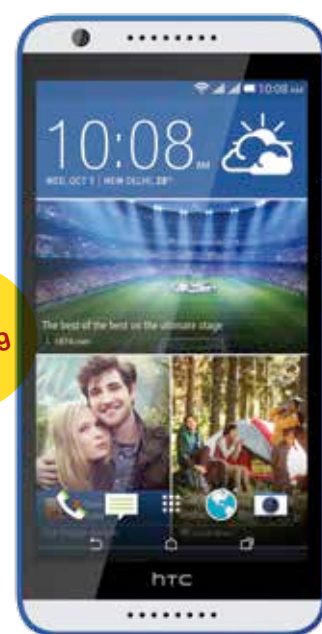

Feature.....	83
Performance.....	72
Value.....	86
Design.....	70

Specifications

Display: 5.5 inch display with 1280 x 720p resolution (267ppi);
Battery: 2600mAh; **Storage:** 16GB;
Camera: 13MP rear with LED flash, 8MP front; **SoC:** Mediatek MT6752;
CPU: 1.7GHz Octa-core; **RAM:** 2GB;

Protection, although sunlight legibility could have been better. Coming to the UI, it's business as usual with HTC Sense 6 laid over Android 4.4 Kitkat. One can see small bits of HTC's custom touches here and there but otherwise it's a clean and true to stock interface. Powered by a new gen 64-bit Mediatek MT6752 SoC, the phone felt fast and responsive even under heavy gaming.

The Desire 820s has one of the best 13MP shooters I have seen in a while. The colour saturation, vibrance and fidelity is top notch. The 2600mAh sealed-in battery is good as well. If you look beyond its design, display and camera, the HTC Desire 820s is an average performer with decent battery life. It might not be the chart-topper I had hoped for but it does take up the challenge quite well.
