House of Marley Get Up Stand Up

House of Bass

Interactive review

Price ₹36,000

The Get Up Stand Up has a rich dark brown wood finish on the front and an eye-catching design. It's quite large and takes up about the space of a small picnic cooler. The drivers are a little too close together and leads to a performance issue that I will talk about later. Overall, it is a fantastic looking product.

The speaker gives undue importance to bass at the

cost of other elements. The bass output is powerful and combined with the high volume ceiling, the speaker can easily fill up a regular flat with sound. Unfortunately, the bass often comes across as unfocused and loose without the necessary precision or thump. Also, like with most modern bass-focused audio gear, the lower end bleeds into the mids and helps muffle vocal tracks when there are a lot of instruments in play. However, if you listen to a lot of acoustic tracks, I think you will be quite satisfied.

As I mentioned earlier, the placement of the drivers is an issue. There is a soundstage and stereo separation issue that comes up due to the large, high-powered drivers kept too close to each other. If you look beyond the clarity and volume, there's nothing really exemplary here.

The House of Marley Get Up Stand Up is priced at ₹36,000 which is just too much. If you don't want to spend as much checkout the Marshall Stanmore or the Harmon Kardon Aura instead.

ASUS Zenfone 2

Zen & the art of good pricing

Interactive review

4 GB RAM eh? Wow, that's a lot of background app activity, something that is especially important for the resource hungry Android OS. More on that later.

The metallic finish on this phone gives it a premium feel. It's not seamless though. The brushed metallic finish should have continued over the top and bottom bezels, with on-screen buttons, instead of physical ones. The black glossy plastic on the front doesn't go with the back.

The UI needs to be simpler and less gimmicky. The Zenfone 2 has 28 pre-loaded apps, most of which you wouldn't need.

The simplest way to define this phone's performance would be something squarely between the Snapdragon 800

Price ₹19,999

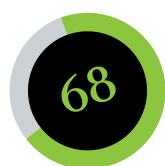

and Snapdragon 801 from Qualcomm. What's even more heartening is the PowerVR G6430 processor, same as what Apple used in the iPhone 5S. The performance is similar to the OnePlus One and Xiaomi Mi4.

The Intel processor isn't as battery efficient as its compatriots though. On regular usage, with some light gaming, but lots of emails and texts, the phone lasted for about 10 hours. OK, nothing great.

The major weakness though is in the camera. The Zenfone 2 is nowhere close to the best. The camera lacks details and struggles to focus when light conditions are uneven. In bright sunlight, images were severely over-saturated and they appeared blown out in indoor light.

Besides the camera, the Zenfone 2 would make for a very good buy.
