A hardcore Star Wars fan painted his Volkswagen van to resemble the famous R2D2 bot. Read more: <http://dgit.in/1FjoUz2>

Lenovo A6000 Plus

Not a complete upgrade

The Lenovo A6000 was notable for bringing 64-bit computing to the budget segment. However, since February other smartphone manufacturers have upped the game and have released phones that equal the A6000. Enter the Lenovo A6000 Plus. This has the same SoC, same design, same display but the RAM has been bumped to 2GB and the internal storage is now 16GB instead of 8GB. This has given the A6000 plus a slight edge over the A6000 in overall performance. However, in app experience is pretty much the same compared to the A6000.

The A6000 Plus has almost the same appearance

Price
₹7,499

and build quality as the older A6000 which means it boasts of solid build quality. The IPS LCD is works well and offers natural colour reproduction. It carries over the same battery pack as the Lenovo A6000 which is a 2300mAh Li-Po one but with the featured spec bump it is slightly less frugal.

Moving on to the camera and one can find the similarities to the Lenovo A6000 again. This means it is a good camera but it still can't outdo the 8MP camera on the Redmi 2. As for the UI, it uses Vibe UI 2.0 which is the same as the one used on the Lenovo A6000.

Overall, the A6000 Plus is a small upgrade over the A6000 and puts up a good fight against the competition. It could've been much better.

Xiaomi Mi Band

The Band of One

A fitness band at ₹999 does sound like a delicious deal, but the Xiaomi Mi Band comes with its share of compromise. At first glance, the device looks like a steal. The Mi Band has premium looks. In fact, the Yu Fit, even with its display, can't beat the Mi Band in the looks department.

The band is made up of two elements, the rubber strap and the dongle. The dongle is what houses the accelerometer and Bluetooth chip. The device is also IP67 rated, which means you can take a shower or go for a swim wearing the Mi Band.

The problem is, the Mi Band isn't very useful. The Mi Fit app, which is the heart of this wearable, seems very much like a work in progress right now. It crashes when you try to share your progress and doesn't offer many useful features. You can use it to set an alarm and ask the band

to wake you up half an hour before your alarm rings.

Apart from that, there's not much else you can do. The band will track your steps all day and give you a number on calories lost. You can't do much with this data, since it doesn't allow you to input the calories intake. In addition, the Mi Band can't track exercise beyond sit-ups and jump ropes. The Mi Band also redeems itself in the battery department. While the Mi Fit app conveniently shows that I've charged the band 55 days ago, while I've been using it for merely two weeks (yes I charged it completely before using it), the battery does last.

Overall, the Mi Band is a stepping stone to buy more useful activity trackers. At ₹999, this is the perfect entry level smartband for trying out a wearable device. It isn't enough for a fitness freak or serious health trackers. What it may do is push you to buy other wearable devices, which cost about five times as much as the Mi Band.
