# SMARTPHONE SHOPPING ON A BUDGET

**Who says buying a decent smartphone requires you to break the bank? We compare smartphones between ₹7k to ₹15k, from brands like ASUS, Blackberry, Karbonn, Motorola, Xiaomi and Yu to tell you which one deserves to be your next purchase.**

**S**ince Digit first came into being, we've seen a lot of changes through the technology fabric. From laptops coming into fashion, smartphones grabbing everyone's imagination, ushering in tablets and the country becoming one of the top markets in the world. None of that though has been more significant than what all of us have witnessed over the last year or two. While most focus on the budget revolution in India, an

important aspect that has just started creeping in is a change in the market itself.

The Indian consumer today is much more educated and informed than he or she once used to be. There was a time we would buy a Nokia 7610 (yeah, that phone you don't even remember) simply because it costed a lot and looked good. The regular consumer would buy phones based on the price, without actually trying to find out whether the investment
