Panasonic has announced the Lumix G7, a camera capable of taking 4K videos at 24p. Check it out here: <http://dgit.in/1dfnB1l>

ASUS Zenfone 2

regular usage, it lasts for about a full day easily. Credit must be given to Xiaomi here, for fitting in a large 3120 mAh battery pack in a device as compact as the Mi4i. The device is actually slightly smaller than the Yu Yuphoria and much smaller than the Zenfone 2, but has a bigger battery pack than both of those smartphones.

The worst amongst these smartphone was the Karbonn Titanium Mach One, which lasted for a mere hour and a half on the battery test. To put

it simply, you can't watch an entire full HD movie on this smartphone without having to charge the battery in between.

BEST PERFORMER: ASUS ZENFONE 2

After comparing the nine smartphones, it is evident that the Asus Zenfone 2 is way ahead of the others in terms of pure performance, and it's no surprise why – the thing comes with not one, but two gigs of RAM. In fact, in the sub-15k smartphone category, it would be safe to say that the Zenfone 2 is well ahead of any other smartphone, and props to ASUS and their secret sauce that ensures the phone beats every other competitor convincingly by a big margin. The phone clocks high on benchmarks and can translate the scores into real life performance as well.

Asus' partnership with Intel, which began the Zenfone line last year has been quite successful, but never more so than the Zenfone 2. The company's earlier Zenfone 5, Zenfone 6 etc.

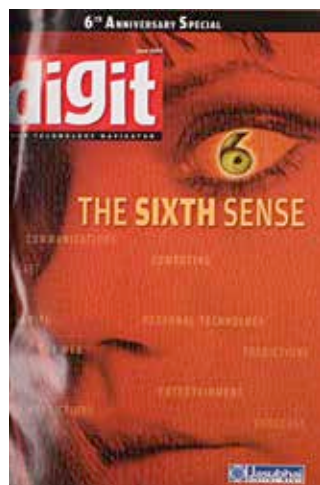

were good devices, but not quite as powerful as this one. The Zenfone 2 performs almost as well as the OnePlus One, which costs almost 40 percent more

than this device. At ₹14,999, if you're looking for a smartphone that will be able to take whatever you throw at it, then this is the one to go for, hands down. We are pretty certain that you won't be disappointed by your choice. Oh no sir!

BEST BUY: YU YUPHORIA

Speaking from a value for money point of view, the Zenfone 2 is a very good phone to buy, but the Yu Yuphoria's lower price tag is hard to deny. The phone performs very well for one that costs merely ₹6,999 and will provide great bang for your buck, unmatched by any other of its competitors in the market.

In terms of benchmarks, the Yu Yuphoria is competitive, with good results on both CPU and GPU tests – we were pleasantly surprised by its performance given its especially conserva-

Yu Yuphoria
