After much delay, the latest version of Doom 4 is all set to hit the stores. Read more: <http://dgit.in/1ecHBLI>

Budget smartphones

Xiaomi Redmi 2

tive price. In addition, what makes the deal even sweeter is the fact that it runs on Android Lollipop, the only sub-7k smartphone except the Moto E to offer the newest, most latest version of the OS out of the box – a commendable achievement, one that is extremely important while buying the phone at the price. Of course, most will be more excited with the fact that Android Lollipop is only at the core, while the phone really runs on the CyanogenMod 12 system. This makes it a geeky phone to buy for all budget-conscious geeks out there.

If that weren't enough, the Yuphoria looks very unique for a phone that costs merely ₹6,999. It's the only sub-7k smartphone to have metal on it right now, even if it is just on the sides. In fact, what we liked even more is the matte finish plastic on the back along with a big

spherical camera module. The device looks a lot like the erstwhile Nokia Lumia 925 and feels really premium for its price tag. So far so great, right? And you must be wondering why this phone loses out if we're waxing all eloquence about it.

While the looks and build of the Yu Yuphoria are its greatest strengths, the phone is somewhat weak in the camera department. That is not to say that the camera is bad. The 8MP shooter on the back is passable, but not as good as the Xiaomi Redmi 2, which, as we mentioned before, has an amazing camera.

EDITOR'S PICK: XIAOMI REDMI 2

With the objective part of this test out of the way, let's take a look at what the consumer looks for while buying a smartphone. We of course want a device that is inexpensive, while still

allowing us to do anything that we would want to. In addition, we want a good camera, one that can take good images irrespective of the light conditions. We are the consumers, our demands are high, and the phone we buy have to come as close as possible to meeting those demands.

Credit must be given to the Xiaomi Redmi 2 here, which in our opinion is still the best sub-7k smartphone in the market, all things considered. The Yu Yuphoria may have its merits, but the performance difference between the two is very small and they both cost the same. What the Redmi 2 loses in the performance department, it more than makes up for with its best-in-class camera at the price. So most definitely, this is the phone for all you clickers.

In addition, the Redmi 2 looks very nice. Yes, it doesn't have any metal on it, but in the budget segment, we can't really penalise the device for it. If you're looking for the perfectly balanced budget smartphones, then the Xiaomi Redmi 2 makes for a very good option. **d**
