C.H.I.P.-ing In!

A tiny computer, with a tinier price tag

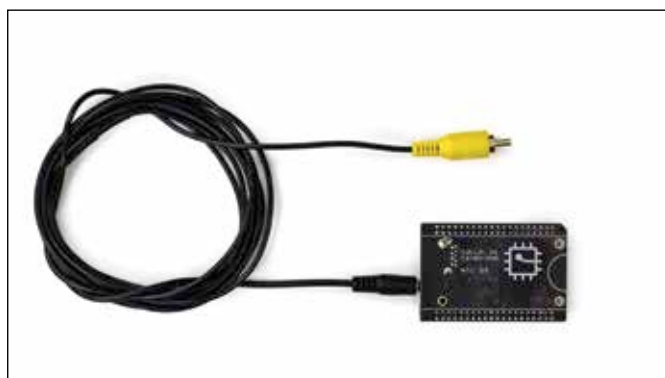

Kiddo swag!

Funskool has buffed up its ops in India by introducing the LeapFrog range of toys. Enter LeapBand, a children's wristband that encourages physical activity through fun tasks. Children can run, jump and play to earn rewards by mimicing a virtual pet that resides in that band. The wristband is rechargeable and is priced at ₹2,749. So, if your child has grown weary of that Hotwheels set you bought last month, you know what to gift him next. Kids are so tech savvy these days.

A few months ago, Raspberry Pi 2 arrived in the market with a price tag of a mere \$35; eyeballs popped. It was cheap, way better than its predecessor and boasted of double the memory and six times the performance. But, now the folks at California based Next Thing Co. have managed to get their counterparts at Raspberry Pi Foundation on their toes, all because of C.H.I.P.!

About the size of three AAA batteries, C.H.I.P., the smallest computer in the world, is priced at a negligible \$9 (much lower than that of the Raspberry Pi 2). The machine runs on a 1GHz processor (The Pi 2's CPU runs at 900MHz) with 512 MB

RAM, 4GB memory and Wi-Fi and Bluetooth capabilities. You can attach a mouse, keyboard, monitor or a TV, whatever floats your boat, C.H.I.P. will just work.

The computer has done wonders on the financial front as well. C.H.I.P. is being crowdfunded on Kickstarter

and overtook its goal of \$50,000, earning more than \$1,653,000 from almost 33,000 backers (so far). An additional \$10 will get you a 3000mAh 3.7V Lithium Polymer battery pack or the VGA adapter whereas adding an HDMI adapter would cost you a total of \$24.

Iron Man S6

Samsung posted a teaser image on its official Facebook account

earlier, of what looks like the box of a special edition Iron

Man-themed Galaxy S6 Edge smartphone. Samsung, however, hasn't guaranteed its arrival in all markets.

Rent your car

U.K. based start-up, Rentcarlo has launched an online peer-to-peer car rental marketplace. The idea is that car owners can earn a few bucks from their car's inactivity whilst providing car renters with more variety and convenient options.

Watch OS 1.0.1

Apple is releasing the first software update for Apple Watch, namely Watch OS 1.0.1. The update is designed to provide general bug fixes. It also adds display support for the new Emoji characters added to both iOS and OS X.

Microsoft Flows to iOS?

Microsoft is reportedly developing an app called Flow, which is set to make its debut on iPhone and will work hand-in-hand with its Outlook app. It's essentially a sort of a "micro-email app", as they call it.
