

Say Jeez!

If you thought the HC-V770 was to die for, you might want to reconsider when you look at the WX-970

Panasonic has pulled another rabbit out of the hat and this one is spotless. Say hello to the new HC WX-970, Panasonic's recently launched 4K Ultra HD Camcorder. The 18.91 MP WX-970 comes with advanced twin camera features such as picture-in-picture twin camera recording and is equipped with an additional camera on the side which enables the user to take multiple shots at a time from different points of view. The camcorder weighs 360g, stretches up to 73mm and is Wi-fi enabled.

Panasonic has left no stone unturned when it comes to the performance of this model. For example, the WX-970 features a 4K mode which is designed to capture high-speed HD images and lets you choose a single frame while shooting video. The camcorder is also packed with features to counter unwanted movement - The 'Level Shot Function' detects tilt and corrects footage automatically. Apart from this, the 5-Axis Hybrid O.I.S.+ feature stabilizes your footage by taking care of blur due to zooming and walking. According to Panasonic, the model captures footage in HDR by

blending different exposures to create a balanced video. This is most useful in high contrast environments such as indoors, or in bright sunshine.

The model also supports AVCHD: Dolby Digital (5.1ch/2ch) audio recording system. Lastly, the BSI MOS sensor empowers the WX-970 to provide you with enhanced shots in dim light and helps reduce rolling shutter distortion.

SPECIFICATIONS

Sensor: (1/2.3type) BSI MOS | **Lens Brand:** Leica Dicomar - 4K: 30.8 – 626 mm [16:9] | **Optical Zoom:** 20x | **Standard Illumination:** 1400 lx | **Focus:** Auto/Manual | **Shutter Speed:** 1/50-1/8000 (Motion Image) and 1/2 – 1/2000 (Still Image) | **Price:** ₹84,990

Battle of the S's

It's curved, it's 4K, it's gorgeous!

Sansui entered the major leagues earlier this month when it launched its first curved 4K HD LED TV, months after LG and Samsung launched their versions. This Japanese consumer electronics behemoth took its time but sure has a trump card or two up its sleeve.

The Sansui Curve 4K Ultra HD LED TV gives wider viewing angles due to its curvature and in this way guarantees that the viewer experiences the visual splendor of the display from any angle. A curved, 3D ready display with 4K support is bound to boast of excellent image quality. The latest model by Sansui displays a resolution of 3840x2160 pixels rendering every follicle on the actor's cheek to perfection. The 55-inch model's revolutionary IPS Display that sharpens pixels claims gives a more realistic approach to every image. The Smart TV module, according to Sansui is equipped with Internet scanning, online interactive media, Internet downloading and provides on-demand streaming media at your fingertips. Sansui Connect series is also enriched with an in-built D2H system

with HD transmission which offers TV viewing without an external set top box, giving zero signal loss and maximum audio and video clarity.

The 4 new series is accompanied by the MHL (Mobile High Definition) interface that allows uninterrupted video streaming from Smartphones, tablets and other devices, while simultaneously allowing you to charge your device. Another salient feature you won't find anywhere but in Sansui's catalogue is WHAM (Wireless Headset Audio Mode,) this feature transmits sound signals over FM frequencies and will enable you to use

a cell phone or music player as wireless earphones. Comparing the model with LG's Smart, Curved 4K OLED 3D TV, you will have to compromise with the OLED display and the magic remote. But, at a price difference of over ₹2,00,000, it's an easy compromise to make.

SPECIFICATIONS

Resolution: 3840x2160 pixels | **Audio:** Wireless Headset Audio Mode (WHAM) | **Screen:** 55-inch, 4K enabled Curved LED | Enabled with in-built D2H system | **Wi-Fi:** 802.11n | **HDMI Ports:** 2 | **USB ports (2.0):** 3 | **Price:** ₹1,99,000 (Starting range)
