

ZTE launches Nubia Z9 Mini

The Smartphone walks on the path of Xiaomi Mi 4i except, it's more loaded.

Chinese device maker ZTE announced the arrival of the much awaited Nubia series of phones with the launch of the Nubia Z9 Mini. This Smartphone is powered by a 64-bit Octa-Core Qualcomm Snapdragon 615 SoC clocked at 1.5 GHz, with 2GB RAM.

The Z9 Mini is not much different in specs when compared to its predecessor, the Z9 Max, except that it has a smaller 5-inch Full HD (1080x1920 pixels) IPS display. It's also bundled with a 16MP rear camera and an 8MP front camera, specially designed for the selfie lover! You also get a 2,900mAh battery, which promises a little over 40 hours of talk time.

The Nubia Z9 Mini and the recently launched Xiaomi Mi 4i don't differ drastically. Although, the front and back cameras do give the former an edge over the latter.

SPECIFICATIONS

Screen size: 5 inches | **Resolution:** 1080x1920 pixels (441 ppi density) | **Memory:** 16GB in-built; 128GB expandable | **Bluetooth:** v4.0, A2DP | **Processor:** Qualcomm Snapdragon 615 SoC

Apple's new baby!

The desk just got more powerful with 67% more pixels. Apple has rolled out a brand new iMac with the stunning 5K display we saw last year. The new 27-inch model costs \$300 (₹19,071) less than the previous version. This version loses the 3.5GHz i5 and gets a 3.3GHz i5 instead. The GPU also takes a hit, moving from an R9 M290X to an R9 M290, the HDD is also downgraded to a normal 1TB HDD.

However, the gorgeous 5K display remains and, despite the drop in price, so does the exorbitant price tag. Still, if you can't survive without a Mac or just want to revel in that glorious display, it might just be worth shelling out the

extra \$300 for the full blown version. What's \$2,200 when you're already spending \$1,900?

SPECIFICATIONS

Processor: 3.3GHz quad-core Intel Core i5 processor (Turbo Boost up to 3.7GHz) | **Memory:** 8GB (two 4GB) of 1600MHz DDR3 memory; four SO-DIMM slots, user accessible | **Storage:** 1TB (7200rpm) hard drive, upgradeable to 3TB | **Display:** 27" Retina display with IPS technology @ 5120x2880
Price: ₹1,59,000

APP WATCH

Phonograph

Phonograph, earlier called Gramophone is a clean music player that has been designed around Google's Material Design Language. This ensures that even the tiniest animations are in line with Material Design, giving the app a beautiful and smooth UI. The app is free and currently in beta. Picking a colour from the album art or cover of the song you're playing, it blends into the UI of the music player, just like the notification bar blends its colour

according to the running app. Phonograph has a very active update cycle, hence great things can be expected from this new music player.

Innbx

Several apps let you connect your favourite social accounts in one single application so that you don't have to use different apps to keep your social life active. Using such clients that integrate your social accounts at one place are great for people and brands that have multiple accounts on the same social platform. Innbx lets you do the same, but the distinct feature here is that it allows you to connect more than one Instagram

account. Multiple accounts are currently not supported by the official Instagram app, so it's quite a pain switching between accounts. The app is in beta and lets you connect only your Instagram accounts for now, the other social accounts will probably coming in on the final release. The app also lets you save the images, so no more screenshots.

Alarmy (Sleep If U Can)

Waking up early in the morning isn't quite pleasant, but not as unpleasant as an alarm. There are thousands of alarm apps out there that you could switch off with just a tap on the screen, not proving strong enough to wake you up. This is boring and also ineffective. Alarmy tries to change that by reworking the traditional alarm mechanism. You register a place in your house by taking a picture of that area and when the alarm ticks off,

you have to take a picture of the same area to turn it off. You also get more options to turn off the alarm by solving a math problem or shaking the phone for a preset number of times.
