

The nuviCam LMTHD

A stand-alone GPS unit that's swimming against the tide in an era of Smartphones with GPS. Equipped with a 6-inch screen (800x480 pixels) bright enough to be visible even in direct sunlight, the device comes at \$400.

Anker

Is here to answer the calls for a faster charging speed for your MacBook, by rolling out the line of USB-C range of portable batteries. The arrival of these cables will undoubtedly ease the issue related to Apple's futuristic single-port notebook design.

BOOK REVIEW

How to Drive a Tank...

and Other Everyday Tips for the Modern Gentleman

How to Drive a Tank is the sort of book that polarises opinions. Its target demographic constitutes the sort of red-blooded survivalists who tend to buy a book and then build a shelf to house it. Although it isn't directed at colour-coordinating metro-sexuals, the book endeavours to make men out of them by delivering just what's advertised on the cover – an outrageous laundry list of tasks that range from being a great dad

and surviving in the wilderness to winning gunfights and getting rid of dead bodies. The book covers an amusing blend of sensible and downright insane virtues that are supposed to define a modern gentleman. And, yes, that includes a detailed guide on driving tanks, as advertised on the cover. The author himself comes as close to a modern-day version of Hemingway as is possible in these peaceful times. From hotwiring cars and picking locks to winning fistfights and wooing women – Coles taps into his adventures spanning the Middle East, SE Asia, Europe, and taking him as far as the North Pole for material. Although Coles goes into fair detail while covering the interesting smorgasbord of tasks, it goes without saying that the book can't be considered a manual for the same. It's still an entertaining read and a great source of inspiration for men to cultivate the spirit of self-reliance.

Nachiket Mhatre

Too many things to do!

The special double DO issue this month, bombards you with a lot of stuff that you can actually do this summer. There are so many things we've covered in this issue that you'll definitely need a way to plan and organise your schedule. Check out the following to-do and check-list making apps to keep up.

Evernote

A neat little app that offers a bunch of features, Evernote is a complete package one can offer in note making and to-do lists. Present across almost every platform out there, creating notes and checklists are made really easy in their intuitive and smooth UI.

Any.do

If beautiful animations and gestures are your thing in mobile applications, Any.do has the best one among the other apps mentioned here. The app falls short from the rest since you can't create a public list that can be shared with anyone,

but if you have everyone using only the mobile application, you are good to go.

Wunderlist

Another good looking to-do list making app, an advantage offered in Wunderlist is that each task under a folder can be assigned to someone along with deadlines and reminders. It contains the remaining bells

and whistles of regular to-do apps, inside a customisable UI.

For good karma, we have created a public Evernote check-list of all the Do stories. Save it to your Evernote and directly jump into DOing. <http://dgit.in/DigitDO>
