(MUST READS)

SILICON VALLEY'S 'STARTUP CASTLE'

It's a self-proclaimed "community of excellence" located in a 17,000-square foot mansion in Woodside, California, just minutes from Stanford's campus. You can't get in if you watch more than 4 hours of TV/movie/game entertainment per week, have more than 1 tattoo, or have ever attended more than 1 protest rally. We're not making this up.

THE ENIGMA OF SATOSHI NAKAMOTO

In early 2009, someone using the name Satoshi Nakamoto started the Bitcoin story. Then, in 2011, just as the Bitcoin phenomenon went mainstream, Satoshi was gone, but the stories grew larger.

IT'S OFFICIAL: GOOGLE GLASS IS A DUD

Google Glass gave Google a black eye in the minds of consumers, cost the company a lot in the way of consumer confidence, and tainted the market for consumer glasses. Read this incisive story chronicling the debacle:

JUST ANOTHER INCREMENTAL UPGRADE?

Apparently not. The iPhone 6s is slated to be significantly better than its predecessors and is said to feature twice the RAM, a significant processor upgrade, better camera, new colour options, sapphire display, strengthened shell and more.

CORTANA FOR ALL

Hi, I'm Cortana.

Microsoft plans to put voice recognition behind anything and everything, making computer vision, voice, and text processing a mere web request away. Find out how (hint: Project Oxford):

3D microbatteries

As we all know batteries is one area where miniaturisation hasn't kept up with industry standards. But there's hope! Holographic patterning was recently used to create 3D microbatteries that are just 2 mm wide and 10 micrometers thick.

Digital criminals aren't smart IRL

While this suspected drug dealer might have been smart online, his little slip-up in real life led to his capture. Find out how his IP was found out because of his habit of obsessively using the package tracking feature (not packet tracking).

Hardware to run the Oculus Rift?

With the consumer launch officially slated for early 2016, Oculus has announced what PC hardware it recommends for a quality VR experience. You'll need a good GPU to push 2160x1200 at 90Hz for one thing. Find out more here:
