

Fun Fact

If you drilled a tunnel straight through the centre of the earth, it would take you 42 minutes and 12 seconds to reach the other side.

Yuck!

The average human being accidentally eats 430 bugs each year of their lives.

DO YouTube Right!

After spending endless hours of watching videos on YouTube, you will realise that it is not perfect. Here are the ways to fix some of YouTube's faults.

Abhijit Dey

While watching videos on YouTube, you've probably faced certain problems and deadlocks on the web player. Let's look at some extensions for the web player and some fixes for the official YouTube app on smartphones to enhance your viewing experience.

1 Declutter YouTube

There are many extensions that bring in bits of enhancements to YouTube. However if you want it all in one place, then SPOI Options is what you should be using. Formerly known as YouTube Options, the extension gives you complete control of YouTube's interface, allowing you to eliminate all the elements that distract you and let you focus on the video only.

Boasting over 120 options to tinker around with, this extension isn't free but is available as a trial for seven days. Some of

these options include being able to change the default video size and quality, block YouTube ads and the annoying annotations, and disable auto-play and auto-buffering. Let's look at some of the useful options that you can use on this extension.

YouTube ads aren't always appreciated while watching videos, and although you might think that Adblock or Adblock Plus is the right solution, they do hamper the functionality of certain other websites. SPOI Options includes an in-video ad blocker that can be checked under Options > Video > In-video ads, annotations, and closed-captions > Hide in-video ads. If annotations bother you equally, you can also find the 'Hide annotations' checkbox in the same menu.

After a video ends on YouTube, it automatically starts playing the next video in the playlist or recommended section. To prevent that, you can head over to Options > Video > Auto-play > Disable auto-play. Videos on YouTube automatically start buffering once opened. If you wish to save bandwidth, then you can disable auto-buffering in the same Auto-play section.

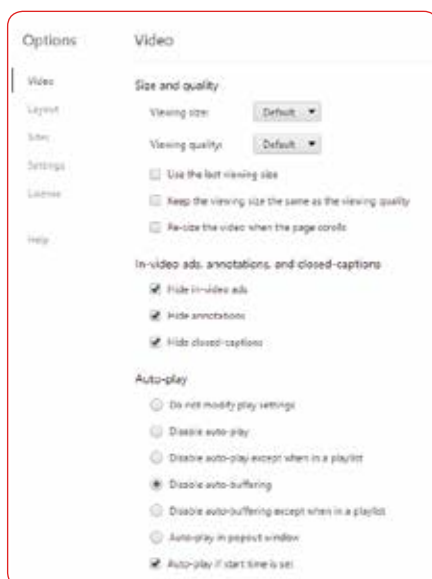

The different sections around the player might not be important to you while watching videos. Using SPOI Options, you can disable the header, playlist, recommended videos, comments and other sections by going to Options > Layout > Appearance. You also have the freedom to disable all the sections by selecting 'Hide everything and matte the background'. You can change the page font and lighting of the page, which is essentially switching between light and dark themes.

This extension can also overwrite settings on other sites such as Metacafe, Twitter, Vimeo, etc. While SPOI Options is a very neat and useful extension, it

isn't free. Following the seven-day trial, you must subscribe for \$1.99 (₹126) every month.

2 Queue videos on the go

With so many music videos uploaded daily, you'd wonder why YouTube doesn't have all the necessary features and options seen in a regular music streaming service. Although, YouTube's own music service Music Key is in Beta, it's an invite-only service and hasn't been launched globally. While you can create your own public or private playlists on YouTube, to add videos to your playlists, you need to open up the video and then add it to your playlist, or to search for the required videos you need to open up your playlist and search for the required videos. Currently, you can't have a temporary queue of videos on YouTube that you can line up to watch or listen to for the current viewing session. The queue feature was initially supported by YouTube long ago, but later it

SPOI Options has over 120 options to enhance YouTube
