

Okay then!

'Science' and 'Shit' are both derived from the ancient word 'Skheid,' which means to separate.

Crazy Car

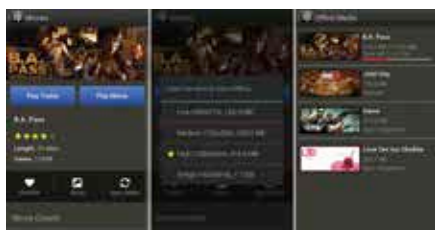

Have to 30k to spare? This insanely awesome car is up for sale. Which one? <http://dgit.in/1HpXXx4>

DO

If you don't care much about Netflix's library and want a more homegrown option, then you should look at Spuul. Spuul is a better option overall when compared to competing streaming options because of its library of free and paid movies, its simple interface and affordable pricing plans.

If you like to watch plenty of Indian movies and want to access them on your phone, tablet and PC, Spuul lets you do that without any issues. You also get to download movies to your mobile devices using the app and you can stream the movies on both your mobile devices and your PC's browser as well.

Spuul charges ₹300 for a month long subscription and ₹3,000 for a year long one after which you get to access its library of premium movies. However, one great thing about Spuul is that it also has a sizeable library of free movies including some pretty new titles like Ankhon Dekhi, Ship of Theseus and B.A. Pass.

Spuul offers a big library of free Bollywood movies

The biggest issue we had with Spuul was that apart from a few filters, there aren't many ways to navigate the library. Also, unlike Netflix, Spuul doesn't have any curated sections, at least none that I've come across so far.

With so many movies in its library, Spuul should quickly plug in a recommendation/curation service. Spuul also compares unfavourably to BigFlix when it comes to the number of non-Bollywood Indian movies, which may turn off prospective users.

There are a bunch of other sources from which you can legally buy, rent or stream movies. Websites and apps like Google Play Movies, Bigflix and Hotstar also have libraries you can browse through and search for the movies you'd like to watch.

Going Legal: Music

If movie studios have been hit hard by piracy, then music labels have been ravaged, flayed, boiled in oil and left to die in the desert. Yes, most music piracy is bolstered by the fact that it's dead easy to pirate music. You can search for the name of any song along with an 'MP3' tag on Google and chances are you'll come across a source to download the song for free. Pirating music is also easy because individual songs are small in size and even downloading an album over a 2Mbps connection barely takes more than 10 or 15 minutes.

A lot of the blame for music piracy can be attributed to the heads of music labels, who, in all their wisdom are yet to embrace the ways of the Internet and still love their ridiculous pricing policies. Also, unless you happen to be a big Taylor Swift or Beyonce fan in India, you will face the problem of delayed international launches and, in many cases, you just won't find an album you want for a reasonable price.

As with movies, streaming has emerged as a medium which makes it easy for consumers to go legal. Rdio is a big name in the global music streaming market and it launched its services in India earlier this year, immediately becoming the best repository of international music available in the country. We have been using Rdio for over two weeks now, and have been so impressed that some of us have signed up for its monthly subscription plan that costs just ₹119 a month. If you've been waiting for Spotify to launch its services in India, then we'd suggest you try out Rdio because of its vast library of international music that ranges from classic artists like Black Sabbath, to new ones like Kendrick Lamar. I was thrilled to find even lesser known artists like Shiner and The Concretes and their entire discographies available for streaming.

Rdio is available as both a mobile/tablet app and a web player and once you've signed up for a premium account, you can either download an unlimited amount of music to your phone in whatever bitrate you want (ranging from 64 to 320kbps), stream music over the Internet or do both. Rdio allows you to stream music for free as well but you have to deal with certain restrictions like ads and the ability to only play artist stations and not a particular album.

Rdio is great for you if you don't want to deal with manually organising your music and want immediate 24x7 access to whatever music you want. However, if you want the ability to download songs on your PC and organize your music yourself, then you'll find Rdio lacking. One thing you must keep

Rdio has a vast library of international music

in mind is that signing up with a streaming service doesn't mean that you own the content you download. Therefore, if you ever unsubscribe from the service, you will lose any content you've downloaded. Another drawback of Rdio is that even though it has tried its best to assemble a sizeable library of Indian music, it doesn't match up to the one that Saavn has.

Yes, if you're a fan of music from Indian artists and like Bollywood soundtracks, then Saavn is the service you should opt for. Saavn has a very good free plan in which you have to listen to ads every so often but are not restricted from listening to music. However, if you want an ad-free experience and want to download unlimited music to your phone, you need to sign up for Saavn Pro for which you'll have to pay about ₹240 per month.

So, to Pirate or not to Pirate? You don't need us to tell you that piracy is illegal and, in most cases, hurts the content creators. However, we also know that certain reasons, make it easier to pirate. That fact though is changing, and the point of this story is to help open your eyes to a lot of ways you can avoid piracy and still enjoy content easily and without paying through your nose.

To sum up, if you've been thinking about going "legal", this is a great time to do it.

Do you think piracy is God's work & "going legal" is the devil's?

Let us know about what do you think about piracy @digitindia
