

DGT

It's back, and it's inside Digit. It's still a work in progress so we look forward to your feedback. Get your dose of entertainment right here!

Nokia is back

Finnish mobile company Nokia declared that it will be back by 2016 and is looking for partners. <http://dgit.in/nokiaisbck>

✉ My Digit story started when I was a kid, and I've been inspired by it ever since. Now, I'm 21 (almost 22) and still like it as much as I did as a kid. I used to fight with my father to buy me a Digit magazine (It was ₹125 back then). My father would buy it for me once and say "no" the next time.

I've always loved computers and back then there was no other means of passing time, especially when I entered high school and parents restricted my TV access. Back then, WindowsXP was the dominant OS. However, being famous it also had many problems including viruses (mostly pen drive ones), Windows Genuine Advantage and sudden system crashes. I lost a lot of saved files of GTA and IGI games that came in your CDs.

As a solution to this, I thought, "What if there was an OS that didn't need installation?". Obviously, I never knew that such a thing existed, and planned to make one. In a later Digit issue, I got an orange CD, titled 'Puppy Linux, Bootable Disc'. After using it, I found that such an OS already existed. Then I Googled and ended up on a site called 'livedcdlist.com', which showed many similar OSes. I was very happy as I now had an easy way to back up all my files and access the internet when XP crashed. I was also able to get into systems, access their files and also remove viruses from pen drives, as they couldn't run on Linux.

In those days, there were two big magazines in the market that were similar to each other - CHIP and Digit. The thing that attracted me to Digit was the Fast Track booklet supplied with it. It was the magazine's biggest advantage. Other magazines such as PC Quest and PC World were just no match to it.

After schooling, since I was good at computers, everyone told me to go with CSE or IT for my higher studies. However, one thing that I've learnt from Digit is that just being good at computers doesn't mean that you should end up in CSE or IT. So I took Civil, and am now happy after completing it. Even though it was a computer magazine, it had content from all fields of technology such as TVs and mobile phones, among other things. In college, I was finally able to save up and

Feedback for the July 2015 issue of Digit

subscribe to Digit, so that I'd remain up to date about the latest tech.

My second year of subscription is ending this month and I have a confession to make: Of all the Digit books that I've bought or subscribed to, I haven't read a single book fully - Its content is so vast. Lack of time due to constant tests and exams in school and college was another reason. Now that I've finished with college, I have plenty of time. I'm happy to renew my subscription again. Doesn't matter if I read them or not, but I'm happy collecting them.

✉ Thanks for taking the effort to write in. We appreciate you sharing your story with us. I certainly hope that you do find the time to read the magazines from cover to cover. Keep in touch and let us know what you plan to do now that you are done with your engineering.

— Robert

✉ I'm a 16-year-old from Udaipur. I first saw Digit in 2009. That's when I became your fan. I became so engrossed that my mother started to scold me given the time I spent with my magazine. I have a few suggestions for the magazine:

1. The paper of the magazine reflects too much light when viewed from an

angle. Yesterday, while eating food, the text in the magazine wasn't visible, so I had trouble reading it. If you can do something about this, then by all means do so.

2. Too many ads. People want technology and technical advice from you, not ads. Please reduce them. The March issue had an ad on the cover page.
3. Finally, can you show deals in your next issue with the prices of gaming equipment for middle class kids only. An issue dedicated to this may be groundbreaking.

So, that's how I feel about you all. I really love Robert and Siddharth uncle. I'm stubborn and won't stop reading your mag, even if God came down to Earth to scold me.

P.S. A personal query: Is there any way through which I can be a part of Team Digit, because I love what you guys do and want to do the same. Please let me know about this and whether I can get a chance to write an article. I'll be glad to give you my latest article on extraterrestrial life. Pretty advanced topic for a 16-year-old kid, eh?

"That's all, folks!"

— Arnav Soni

✉ Let's answer your queries one at a time:

1. There are many different qualities of paper, and the glossier ones usually
