LETTER OF THE MONTH

✉ Yet another awesome edition, but this time the credit goes to SKOAR! Reading Digit last week put a smile on my face on more than one occasion. No wait, it actually made me laugh out loud, in a good way. As is my habit I usually read through the letters first, flip to the end, go through Bazaar pages and Tips and Tricks, flip again to the editorials and then, the rest of the magazine. That's when I realised that there were more typos in this edition than ever. The kid in me likes to think you did that for fun and on purpose, just to get under the skin of the grammar nazis. The 28-year-old me hopes you did that for fun. Jokes aside, it still had great content and I loved it.

On to the serious topic: SKOAR! Firstly, What?!! You guys got your hands on Dragon Age Inquisition? How? Where? When? I thought the developers decided that Indian government, and by extension, Indians, would find some of the game content to be sensitive (read: intolerable). Or did I miss something?

Secondly, let me tell you I'm a huge fan of the Witcher games and books (I can't believe there are people who've played the games and not read the original, albeit translated, versions), not just because of the gameplay and story, but also because the company that develops them is just awesome. CD Projekt has earned my complete respect

for how it treats its customers and fans and consequently reinstated my faith in game companies (CDPr exclusively). The problem is that I can't seem to get a physical copy of the game where I live – not just my city, but the entire state, it seems (Kerala, if you were wondering). Any help on that matter would be greatly appreciated. And please don't direct me to Steam. I won't be able to download such a huge file over the net.

Thirdly and finally, I find it quite ingenious on your part to sneak in a second poster on the inside cover of the Skoar magazine.

Keep up the awesome job.

PS. Really loved the RSS Feed this time. Especially the fact about Soundhound. That sounds like something I really need, because I rarely remember names of the songs or artists I like and all I'm left with is that little tune in my head. I didn't even know there was something like that. Cool.

📌 I wish I could tell you that the errors you spotted were deliberately introduced for a bit of "fun", as you put it. Alas that wouldn't be true. Last month's issue was (hopefully) an exception as we were terribly short-staffed for the month. The copy didn't go through the usual rounds of proofing. You'll see the quality bounce back in the coming months.

Your appreciation for SKOAR! is much appreciated. Yes, due to a bit of overzealousness on the part of the studio, Dragon Age didn't see an India release. I have no clue how Nikhil managed to get a copy though; feel free to ask him yourself on Twitter @postwar. Also glad to meet another Witcher fan! CD Projekt has done a great job developing the lore of Witcher's universe as information related to it isn't just divulged in notes, letters and other things you encounter in your travels, but also through eavesdropping on passers-by, doing side missions and just exploring the vast landscape. I'm having a terrible time trying to put down the game controller on weekends, because it just sucks you in. Similar to Dragon Age, its lore is uniquely appealing for an RPG fan.

I've been playing the game on PS4 over the past month or so, and I just checked with <http://www.expressgames.in> (they officially distribute the game in India) and they confirmed availability of a PC copy of the game (here in Mumbai). I recommend calling them up, giving Digit/SKOAR!'s reference and finding out how best you could get your hands on the PC copy of the game. However, be warned – despite installing the game from the discs, you'll still have to download a patch and update the game before starting to play it, and this will cost you over a GB of download. Bummer, sorry about that, but at least it's better than having to download the entire game through Steam, right?

Happy gaming to you!

reproduce colour a little better, as they're manufactured in a way that does so. If you compare the quality of, say, Fast Track to the main Digit magazine, you'll see that although text is a lot easier to read in the Fast Track, the images in Digit look a lot better. Thus for text-heavy books such as Fast Track and dmystify we use less glossy paper, and for image-heavy content such as in Digit we use glossy paper.

2. Ads are just a way of life, and neither

we nor anyone else is going to get rid of them anytime soon. If you're all willing to pay ₹400 per issue of Digit, we can safely get rid of all ads. It's also an optical illusion, because all advertisers want their ads placed in the beginning of the magazine. Thus, you think that there are too many ads, but when you go through the magazine you'll find that barely 10 or 15 per cent are ads.

3. The definition of middle class itself is so vast now that everyone with a

budget-range of 30k to 1.5 lakh consider themselves to be middle class. You're going to have to tell us your budget, and drop a mail to agent001@digit.in for all specific buying related queries. We'll do a gaming special sometime soon though, so keep an eye open for that.
