what do I get instead? Four gameplay trailers, of which two are of an already released game.

This isn't a complaint, guys. It's just an avid reader of your magazine who's completely disappointed. How hard can it be to include 6-7 videos when you do that every year.

Seriously, I'm so disappointed in you.

– Harsh Mandan

4 As you already know, this year's E3 conference was scheduled right in the middle of the month, so we couldn't risk delaying the mastering of our DVDs. Game publishers and studios took around 2-3 days to upload their keynotes and press conferences, which further delayed our plan of adding the E3 content.

We understand how much you want to watch the gameplay for Doom or get to know about all the announcements from Xbox, so don't worry, we've covered all the important highlights from the event in this month's DVD. Happy watching!

– Abhijit

✉ I've been reading Digit for a year and a half. I still remember that day when I accidentally came across this tech mag (January 2013 issue) at my cousin's house. That was the day I found my hard printed tech companion and continued to buy it each and every month since then.

This is my first letter to you guys. I couldn't resist writing in this time, especially after reading the July 2015 issue's cover story – 'Be your Own Boss', with which I could personally connect. Siddharth Sir, your story of an attempted startup particularly awakened the feeling inside me to do something interesting. Maybe, this is one of the crucial reasons for which I'm sending this letter. The thing is, I personally love the kind of work you guys do – i.e. reviewing and testing the latest gadgets, writing articles on them and overall finding and sharing info on the latest technological advancements – and it interests me. Let me inform you, I've become a tech adviser in my locality. Anyone wanting to buy a new gadget related to anything comes to me for advice and a large part of the credit for this goes to Digit. Many times, I've

researched smartphones to find the best one to buy within a price category and the same smartphones have appeared in your next issue as best performer smartphones! And that just makes me feel like saying "Yes! I predicted correctly."

Looking at the kind of amazing work you guys do, it makes me feel as if I too belong to your community, and I'd quite love to work for Digit. Actually, I just mentioned one of the deepest wishes of my life i.e. to work for Digit! I'm a member of your Writer's Club and have even sent you an article, namely 'Technology vs Imagination' and would be rather grateful to see this topic as the theme in one of your future issues. Now that I've expressed my wish to work for you guys, I should inform you about my qualifications. I'm at present in IT Engineering, Second Year and to be truthful, I messed up this year of engineering due to some of the first year subjects that weren't cleared. Now, after knowing this, one may think that my failure in this year has led me to send this letter requesting to work with you. However, that's not true, since the main reason for this letter is my interest and passion for the technology-related stuff you do. I wouldn't describe myself in this letter anymore. Rather, I'd just say give me a shot, I won't let you down.

– Nikhil Nagvekar

4 I feel quite humbled that my little attempt (and consequent failure) at setting up my own little startup inspired you in some way. The one piece of advice I'd like to give you is to not get bogged down by failure. As long as you get up, dust yourself off and carry on, you'll surely be a success in the long run. From the way you've described yourself, you'd be a good fit here at Digit. Let's put you through our gruelling interview process ASAP. I'm sure you'll want to finish your Engineering, but till then you could intern with us during your semester breaks.

– Siddharth

✉ Hello. I am a 16 year old guy and I'm a real tech geek. I have deep interest in technology and I feel that studying is just a waste of my time as it's something which doesn't relate to my passion at

all and because of which I'm not able to devote time to my passion - Technology . I always keep on trying new stuff on my pc. And failing has never demotivated me. Starting from simple computer tricks to hacking and editing. I have experienced all fields. Even in my school I just spend my whole day in our Computer Sci. Lab and have become a part of our school Tech fest – Silico Battles . I was thinking if Digit can be a platform for me by maybe having me on as an intern? People say studying makes them successful, for me it's seems to be a waste for my career. So if I could get my tech stuff (internship) with my college which I'll be joining next year, I'll be pretty happy. Though I was aiming for Google to be honest, but Digit isn't any lesser and somehow due to lack of contact with Google I lost my motivation years back. But I'm confident again. I may not be good in the beginning but I assure you that I have the potential to be the best when it comes to technology.

– Mayank Jain

4 It seems like you're definitely having a dilemma and you're not alone. Many of us have gone through something similar back when we were studying and have gotten to where we are after having worked through them.

This feeling that your studies are hampering your progress in life might be misplaced. Either ways you need to seek help and work through this phase to resolve these feelings. A professional degree isn't just about having a few letters after your name, the entire experience helps you in myriad of ways and the friendships that you'll form will stay with you for the rest of your life. In short, it moulds your character. Moreover, our society is still biased towards those that have a few letters after their name as compared to those who don't. So the importance of completing your professional course is something that you shouldn't take lightly. However, you should never let go of your dreams. To be honest, we're quite taken back by your interest in interning with Digit and we're always looking towards having new faces around so do write in to us once you've worked it all out.

– Mithun
