

BMW 7 Series in-car entertainment system

The promise of fancy cars having fancy in-built lounges is not unheard of, and there have been many concept cars that have shown this feature. Whether or not they went ahead with it in the final product is another matter, but BMW has given us this, and to be honest, the in-car entertainment here is the best it has ever been. With a 31-inch theater screen, the BMW 7 Series in-car entertainment puts other in-car entertainment systems to shame. This in fact is the future of in-car entertainment. And if we are being honest, it even puts some home theater setups to shame.

With the 31-inch screen, the theater screen which can be deployed at any time boasts an 8K resolution,

with the supported aspect ratios being 16:9, 21:9, and 32:9. The 7 Series also comes with an in-built 5G connection and Amazon Fire TV. This allows the passengers to enjoy streaming services like Netflix, Amazon Prime, Hulu, and YouTube at any time they want, and in 4K UHD no less. The entertainment system also allows passengers to play games, listen to music, watch

live TV or watch one of the pre-downloaded content that comes with the entertainment system. The system also offers two sets of Bluetooth-connected headphones and multiple viewer profiles that allows easy switching of preferred content.

With a state-of-the-art sound system and an accessible touchscreen for ease of use, the screen also comes with voice control that lets passengers in the rear seat control the system using their voice, by using the 5.5-inch touchscreens built on each rear door. This is truly the future of in-car entertainment systems and we cannot wait to sit in a 7 Series and experience it first-hand.

Limited edition BMW M4 pays homage to 3.0 CSL Batmobile

BMW released a limited-edition M4 that pays homage to the iconic 3.0 CSL and is reviving the 3.0 CSL name by doing so. The Coupe Sport Lightweight that was released in the 1970s is considered to be one of the most iconic sports cars of all time because it was extremely versatile and was built only in small packages. It was given the nickname "Batmobile" because of its wild and robust aerodynamic package.

In 2015, BMW revealed its concept for the 3.0 CSL Hommage R, and it boasted similar features when compared to the original, with its massive wheel arches, double rear wings, and featuring a phenomenally striking livery. Come 2023, when the car was finally released, the 2023 BMW 3.0

CSL is the product car enthusiasts all over the world were waiting for for the past 7 years. This car also marks the 50th-anniversary celebration of BMW's M Series.

When it comes to the design of the 2023 BMW 3.0 CSL, it is eerily similar to the 2015 concept. The kidney grille has

a lattice-shaped insert in a diamond structure, with the frame of the car having a satin-aluminum finish that is also present on the side window. The laser headlights, which are a design borrowed from the M4 CSL pay homage to classic racing cars, and also to the M4 GT3 that won both the drivers' and team DTM Championships in 2022.

The body of the 2023 BMW 3.0 CSL has unique bulging fenders, that houses 20-inch front and 21-inch rear wheels, with a double rear wing that is directly inspired by the original 3.0 CSL "Batmobile". BMW says that "virtually all bodywork sections" are made of Lightweight Carbon Fiber Reinforced Plastic (CFRP). The livery is the usual Alpine White Uni paint with the traditional M Series graphics and accents.

The car also features BMW's most powerful inline-six engine, with a twin-turbo 3.0-liter engine capable of producing 553hp and 404lb-ft. It also comes with a pre-installed six-speed manual shifter that makes it the perfect choice for car lovers.
