

DOES THIS SECTION EVEN NEED AN INTRODUCTION? FROM COMPUTERS TO MOBILES, AND HEADPHONES TO GPUS, IT'S ALL HERE...

THIS MONTH IN TECH: Find out the origins of microphones, tips and tricks that will help you to move from an Android to an iOS device, and the future of automobiles. Then look at the potential of a metaverse for foodies, some misleading smartphone specifications, future of AI in automobiles, and more...

iCloud glitch sends users pictures to strangers

Microsoft recently launched the iCloud for Windows app, which allows users to connect their iCloud accounts with the Photos app on their PCs. This app has already developed a glitch and a pretty serious one at that. <https://dgit.in/iAmCloud>

WHAT'S NEW

No 5G at the airport?

In early November, the Federal Aviation Administration (FAA) of the United States requested the Federal Communications Commission (FCC) to put a stop to 5G rollouts in mid-band and C-band near airports due to safety concerns. Now, India is following suit, with the Department of Telecommunications (DoT) forbidding Jio, Vi, and Airtel from providing 5G in C-band near airports. These telecom companies have been told not to offer 5G in 3 GHz to 3.67 GHz frequencies within 2.1 kilometres of an airport as they might cause interference with aircraft equipment. As a possible solution to this, the Directorate General of Civil Aviation (DGCA) has

decided to replace the altimeter filters in aeroplanes. Once this is done, the telecom giants

will be able to roll out 5G in these areas as well. As of now, DoT has mandated that 5G base stations installed up to 540 meters beyond the 2.1-kilometre distance (where the network cannot be rolled out) only emit 58 dBm/MHz until the process of replacing all altimeters is over.

TRAI might help you kiss those spam calls goodbye!

The Telecom Regulation Association of India (TRAI) said it is working on its proprietary technology to help detect pesky spam calls. According to TRAI, Unsolicited Commercial Communication (UCC) is one of the biggest annoyances faced by the common public. Three steps being taken by the Regulatory authority include implementation of UCC detect system, provision of Digital Consent

Acquisition, intelligent scrubbing of the Headers and Message templates, using AI (Artificial Intelligence) and ML (Machine Language), etc." In 2018, TRAI issued the Tel-

ecom Commercial Communications Customer Preference Regulations to reduce the sheer volume of spam calls received by customers. It created an ecosystem of blockchain that requires telemarketers and commercial promoters to register on the platform and seek consent from customers to send messages and call them at any hour of the day.

Foldable Screen Laptop - Coming soon!

Samsung has been working on foldable devices for a few years now. Now, the company is working on a folding laptop, based on the recent patents filed. This might be interesting as other competing brands have also been reported to be working with a similar concept. <https://dgit.in/foldie>

Microsoft's Activision takeover to be put on hold

If you thought that you will soon see Microsoft and Activision Blizzard co-branded games, then hold your thoughts as the merger might be put on hold. The US Federal State Commission in all likelihood is set to block Microsoft's takeover. <https://dgit.in/NoActing>

I am titanium!

The iPhone 15 series is set to feature a rear glass panel, albeit with curved rear edges, similar to the bottom edges on Apple's MacBook Pro models, as per MacRumors. These changes could be a part of a major re-work of the charging system that Apple might be working on for the next iPhone release. <https://dgit.in/titanium>
