Millions of Android devices running on Mali GPUs at risk

Tech giant Google has warned millions of Android users about a potential bug that could compromise their devices. The company's researchers have found out that a bug in the graphics processing units within the Android devices could make the devices prone to hacking. Google's Project Zero team has passed on the information to ARM, who has reportedly fixed the bug.

However, smartphone manufacturing brands such as Google, Oppo, Xiaomi and Samsung have deployed the required patch to implement the fix. The devices that use an ARM Mali GPU are at risk of

being hacked by a bad actor. However, Google researchers discovered that all its test devices using Mali GPU are still vulnerable to the issues. Google has warned companies to remain vigilant, and provide patches as soon as possible.

MOBILE WATCH

Samsung Galaxy S23 Plus

The upcoming flagship lineup will feature three models - the Samsung Galaxy S23, Samsung Galaxy S23 Plus, and the Samsung Galaxy S23 Ultra. All three models will have a Snapdragon 8 Gen 2 SoC (as opposed to an Exynos one). A case leak in the past also confirmed that the smartphone may have a triple camera design that is quite similar to the Samsung Galaxy Z Fold 4 5G. In other news, the Samsung Galaxy S23 is said to be equipped with a massive 200 MP camera. It will also have a 10MP 10x zoom sensor and a 12MP ultra-wide-angle lens. The smartphone will also feature an AMOLED display with over 2,200 nits of brightness. The Korean manufacturer has hinted that the smartphone will launch in February at the Unpacked event. While this is not confirmed, it is believed that this event will take place in San Francisco, and will be the first Unpacked event ever since the pandemic started in 2020.

iQOO 11 Pro

iQOO has become one of the biggest names in the smartphones business on the back of some really impressive phones launched over past year or so. And now, the company is getting ready to add to the list by launching its next flagship smartphone, the iQOO 11 Pro.

Set to become one of the most powerful devices in the market once its

launched, the phone is expected to use the Qualcomm Snapdragon 8 Gen 2 SoC. Ahead of its launch, we've gotten a glimpse of its performance after an iQOO 11 Pro prototype made its way to benchmarking website Geekbench 5. The leaked results of the device for the benchmark shows that it managed a good single-core score of 1,466 points, with the device also scoring an above par multi-core score of 4,686 points. Further, the benchmark listing of the device also confirms that the device will come powered by the Snapdragon 8 Gen 2 SoC paired with an impressive 16GB of RAM in the top version. Interacting with the hardware will be a copy of the Android 13-based FunTouch OS. Previously, leaks have suggested in the past that the iQOO 11 Pro will come with Vivo's V2 image processing chip. This chip promises better low-light performance and faster results. Other than that, the iQOO 11 Pro is said to have a 6.78-inch E6 AMOLED display, run on Android 13 and feature the BMW M Motorsports design.

APP WATCH

28

If you were looking for an app that tracks your menstrual cycle and also suggests exercise patterns and regimens, then 28 is the perfect app for you! Both the functionalities are baked right into this app.

Noteit Widget

Ever wanted a space on your screen that you share with your friends or loved one?

Noteit Widget is made for you. It lets you place a widget on your screen where any input by added users appears there.

Daily Diary

The world has moved on from pen and paper (well that feel is something we still crave for), and the makers of the Daily Diary think that your daily diary entries should too.
